Measured all voltages again - exerything's fine with either exactly or a
little bit around 5.00V (less than 5%).

XL BASIC is written very cleanly (legal calls only) so it should work
without problems on an 800 OS. Easy to check it out using an emulator.

K.

I live in the armpit of Ontario. It's a small city in the southwestern tip on the Canada/USA border called Sarnia. It's largely an industrial town and is fairly well known for its petrochemical industry. Many major oil companies have refineries in or around Sarnia including: Exxon/Mobil (Imperial Oil), Shell, Suncor, etc.

In the eighties, Sarnia was Commie central. Anybody that used 8-bit computers in these parts, used either the Commodore 64 or Commodore 128. The Apple II was not as prevalent and the Atari was even less so. Since I was a teenager too young to drive and too poor pay for transportation, the Indus drive was very much out of reach.

The drives to be had in this town were the Atari 1050's because a rather large Canadian department store (Woolco) carried them. My original 800XL and 1010 Data Recorder were purchased from another retailer that has long since moved on, Consumers Distributing. My Atarii XMM801 Printer was purchased from a small local shop that goes by the name of The Computer Terminal. The Computer Terminal was the only local retailer that carried Atari software and magazines such as Antic, Analog, and Atari Explorer. The

Computer Terminal, I believe, is still in business, but they do not carry
Atari merchandise any longer, as you might imagine.

I sometimes get accused of "trying to clean up the town" for having spoken
against a local radio station.

Anyway, this local radio station somehow became synonymous with rock and
roll and everything affiliated with, associated with, condoned by, or

resented by rock music. How this came to be the case, I'll never know. After all, it's a small radio station in a hick town that probably wouldn't know what rock and roll was if it bit them on the nose.

I guess this idea that I was trying to clean up the town comes from the fact that I used CAB codes in my efforts against this radio station. CAB, for those who don't know, is the Canadian Association of Broadcasters and all three of the local radio stations are members.

To make a long story short, since I made the absurd suggestion that a CAB member station should adhere to the codes established by CAB, and by extension of their membership, this local radio station, I was imposing my will on this station. Unfortunately, to say that I was imposing my will on this station is tantamount to suggesting that I impose my will on a government by expecting them to abide by laws that they themselves established. The argument of this radio station is really quite absurd.

Interesting point to note: My big driving force was to secure choice and possibly even gain some competition in this market. Was this a rational pursuit in a market where all three local radio stations are owned and operated by the same company? Blackburn Radio Inc. says, "No!" Blackburn Radio Inc., the owners of Sarnia's three radio stations, maintain that there is competition and choice in the Sarnia market despite the fact that there are absolutely no local radio stations that aren't owned by Blackburn Radio Inc.

Fast forward a couple of years and consider the Windsor market. There are four radio stations in Windsor, Ontario and all four are owned and operated by one company. This time, the owner of the radio stations is CHUM group.

Bea-Ver Communications, now wholly owned by Blackburn Radio Inc., sets up shop in Windsor, Ontario. What is their rationale for wanting to setup shop in Windsor? They claim that because the four radio stations in Windsor are owned by the same company, the residents of Windsor have no choice in the stations that they listen to. Essentially, they argued that there was no competition in the Windsor market and that Blackburn's entry there would provide much needed competition and choice for Windsor residents.

Sound screwed up? It is! They essentially validated the same argument that I had made a couple of years prior! Man, radio station operators are stupid!!!

I sit here and wonder when Blackburn Radio Inc., is going to allow competition in the Sarnia market, the Chatham market, and the Wingham market? All three of those markets have three radio stations each, and in all three markets, the radio stations are owned and operated by the same company: Blackburn Radio Inc.

Don't even get me started on their "Repatriation" mission! I apologize for the rant, but I needed to get that off my chest!

Cheers,
William

Well, darn. I thought I had a deal worked out for a copy of this, but it
fell through at least for the time being. If anyone else has this book
available, please give me a yell.

thanks!

The 130XE portable was very cool, and my money says you could fit two of
the three R/C cells unde the hood of the machine. The show was pretty
interesting. I didn't get there in time for the speakers, but I did
enjoy the exhibits. Lots of cool stuff on display - I think I was
mostly interested in the Sinclairs, since those are machines I have zero
knowledge of and since one was extremely rare while one was extremely
modded. There was plenty of stuff I have never seen before, including a
good number of kits, at least 3 exhibits featuring ST machines, and the
"table o' clones" made for some nice conversation.

As for stuff up for sale, there was a huge pile of Sun and DEC
workstations along with some RS/6000 and 370 machines, most things going
for $5 or $10. Some people got some great deals on the mostly free

hardware tables nearby. Of course, there were a couple more tables of random stuff, one of which supplied my only buy of the day: a $5 Kaypro 16. The hard drive isn't exactly cooperating, but it's otherwise in great condition, plus it's a cool piece of history in my book. Only problem was lugging that "portable" back to my car in the parking garage. Anyone know where I can get a replacement 10 MB Winchester? :)

Anyway, thought I'd put my 2 cents in about the show. Hope to see more stuff coming to the Indianapolis area in the future. Hint, hint to you organizers out there...

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

I'm trying to find a good disassembler to use in looking at a couple 8-bit
binaries. I have tried a couple based on other posts I saw, but neither
seems to give me what I'm looking for. DIS6502 seems to spit out invalid
opcodes and undefined memory addresses (then again, perhaps I'm using it
incorrectly), and Rom File Designer looks to be more oriented to binary
editing. Anyone have a favorite disassembly tool to point me towards?

thanks

IMO for most programs you will need some kind of tracer instead of a
disassembly dump. I mostly used Omnimon but DDT would be good too if you
have the time to learn how to use it.

The problem you run into most often with a disassembler is it will try
to do things like convert a modified character set into code. For me the
first step in any disassembly is to find out where there is data vs.
code and where the tables/data starts and ends. It is sometimes helpful
to look at a straight dump of the binary to find the embedded text for
instance. There are several ways it could be in there, ASCII that goes
through CIO, NULL terminated strings from C compilers, 128 added to the
first character to flag end of text, leading number i.e. '5thing'.

Some of the stuff like data tables will be a little tougher. Usually
they start with some initialization, indirect index, decrement, and a
loop. i.e.

```
LDX #9
loop
  LDA $4000,X
  STA $600,X
  DEX
  BNE loop
```

In something like this you can see either code or data that starts at
$4009 down is being relocated to page 6.

Once you get all the data start and finish locations you can have the
disassembler work around them.

Indeed. I used to use an x86 disassembler called Bubble back in the day.
it would give you an initial disassembly of your exe making best guesses
what was code and what was data, then you could interactively point it to
which areas should be which. That made it really nice to use. If there
was something like that for the 6502 (preferably something I could actually
run on my DOS/Win box to do the disassembly), it would be perfectly suited
to my needs.

Ooh - I just looked back at Bubble Chamber to remind myself how cool it
was, and I found that the x86 opcode mappings and such are all in an
external text-based data file. That means, if I was so inclined, I should
be able to generate such a file for the 6502 mnemonics and go from there.
Not only will that help me with disassembly, but I'll probably learn the
language better as I'm folling with trying to get the disassembly correct.
I may even be able to do something with the standard equates.

Now, a second question that would help me with this: what is the most
complete/accurate reference for the 6502 instruction set? I have,or at
least have access to, a wide variety of references for this, but I know

sometimes they're not entirely accurate. What's our favorite? :)

I recall a program from ANALOG called BBKMON. Seemed pretty good to me.

I seem to recall near the end of its life Antic Magazine had a cover
disk bonus disassembler that was good. I can't remember all the reasons

I didn't use it at the time, maybe it was disk based or something. You
may want to take a quick look and see if you can find it.

I am probably alone in the world on this but my favorite book was "6502
Assembly Language Subroutines" by Lance A. Leventhal and Winthrop
Saville. The other books were good but went into processor internals. I
just wanted something that had a lot of practical examples of how to use
the instructions to do something useful.

My favorite Atari-based disassembler was/is the "Ultra Disassembler" by
Ralph Jones (Adventure International). Two strong points: it would
re-create pseudo-source code that could be re-assembled, and it came
with a very good manual that pointed out many of the tricks/pitfalls of
disassembly. For Q&D disassembly (and hacking), you can't beat
Omnimon. In fact, Omnimon is just plain superb! (ok, IMO anyway.)

DIS6502 is nice but you have to use the ATASCII display and seperate
the data/code/graphics sections yourself. After you mark each section
as data/code/etc it will re-disassemble the file.

Cool - I just started working with it and actually did not realize you
could do that. Unlike what I've seen with 8086 disassemblers, would it be
expected to spit out uncompilable code if those sections have not been
identified?

    For the most part you should be able to re-assemble the output, even
  if its full of odd 'code'. Unknown opcodes will just end up as .data bytes.

    Just make sure the output format is set for your assembler. I have

no problem getting it to spit out TASM compatible files.

I believe I have this, if anyone wants it, I'm through with it. Make me a
decent
offer for it. I'm not here to get rich, I acquired it in a lot so offer
accordingly.

I lived on the Detroit-area Atari BBS's in the mid-80s. Then I learned
how to use the U of M dialups and got hooked on the multi-user Unix
BBS's in Ann Arbor. Do you still remember the names of the boards you
used to call? What was your "handle"?

Hi all.

AFAIK, the Atari used the same keyboard legending for the US and the UK
market.

Were there any other variants?

I know there was a French SECAM model, and I presume they had an AZERTY
keyboard and a modified look-up table in ROM.

Any others? German and Spanish for example?

I use the da65 tool from the cc65 c compiler toolset.

It is pretty sophisticated.

For Apple II I just kludge out routines with Merlin Pro, but I really do
need to get familiar with cc65 and ca65 if I want to get serious. :o)

> I'm fighting the urge to buy and scan it for posterity! :-)

I'll probably still have it if you want it to scan   :o)
Unless I get the eBay everything urge again.

Hi

I've investigated on the c.s.a8 archives and found out I can replace my
XL OS with the 400/800 OS. I have a 800XL and have both PAL and NTSC
binary file versions of the 400/800 OS. I have burnt an EPROM with the
NTSC version of the 400/800 OS, and another one with the PAL version of
the 400/800 OS. On both cases, I used a 27128 EPROM.

Next I opened my 800XL, took off the original XL OS and replaced it
with the NTSC 400/800 OS. Turned on my XL, but nothing happens, all I
got is a black screen. Tried the PAL version, but I got the same
result. Put on back the XL OS, and I get READY on the screen.

Am I doing something wrong here?

Regards

Apart from the firmware, you need the right PAL/NTSC ANTIC or GTIA.

If neither version works, I suspect the firmware is not right.

Perhaps you have an XL BASIC trying to talk to an 800XL OS that is not the
same as an 800 OS ROM.

Hi

I just took off the BASIC chip and launched my XL with it's original XL
OS. It booted and launched the SELF-TEST right away. Then I replaced
the XL OS with the EPROM containing the 400/800 OS and got the same
blank screen. Nothing happens.

One thing I noticed is that the blank screen is exactly the same one
when I boot the XL without any OS...

Regards

The Interactive Disassembler Pro (IDAPro) by DataRescue:
http://www.datarescue.com/idabase/ida.htm
As that's quite expensive you can you the old (DOS) freeware
version which is available here:

http://www.mkeates.f9.co.uk/
I may have a simple tutorial I wrote up for it somwhere too.
If I find it I'll post it up - but DEFINITELY worth a look.

Regards,
Mark

Hi,

> Were there any other variants?

> I know there was a French SECAM model, and I presume they had an AZERTY
> keyboard and a modified look-up table in ROM.

> Any others? German and Spanish for example?

Well, the german version also used the US keyboard layout (i.e. QWERTY
and not QWERTZ), the Os is identical. To get the timing straight, it
checked for the model and initialized the timing tables accordingly,
thus only one Os.

It differed in so far as the video chips were modified to generate a
PAL signal and not an NTSC signal. Since the video frequency is
different, the base frequency of the system is a tiny little bit
different, and there's a PAL version of ANTIC and GTIA in the system.
The most notable difference, as far as the internals are concerned, is
that there is a second oscillator that runs at 5/4th the main clock
speed that drives the color generation for GTIA. This has to be done
since the PAL color encoding differs from the NTSC color encoding;
specifically, the color carrier is not a sub-harmonic of the
pixel-frequency. (Which is one of the reasons why PAL colors are more
immune against distortion than the NTSC TV system). The TV modulator
is, due to that, of course also different. Anyhow, I don't think you

would be able to tell from the outside.

So long,
     Thomas

i think that the french secam models has QWERTY keyboards just like
all the others - i have one XEGS system coming from france and it's
keyboard is regular.

the only different XE system i heard about is the arabic version of
65XE. the changes was in the keyboard (arabic letters) as well as in
the ROM of the machine (editor was right-to-left, the charset had been
changed).

Hi,

> I just took off the BASIC chip and launched my XL with it's original XL
> OS. It booted and launched the SELF-TEST right away. Then I replaced
> the XL OS with the EPROM containing the 400/800 OS and got the same
> blank screen. Nothing happens.

Despite any hardware problems, i.e. you should check whether the Os
arrived in the ROM correctly and the chip layout fits, there are a couple
of weak points in what you're doing:

a) The PIA is routed differently in the XL systems. Specifically, its
port B is connected to the memory management unit instead to the third and
forth joystick. Which means that the PIA is initialized improperly for the XL
hardware by the Os/A ROM. Port B is an input on Os/A, but has to be an
output port for the XL hardware. This *might* be no problem because open
TTL inputs - and the controller pins of the MMU are then open because they
are connected to another input - typically read a one and not a zero, and
this corresponds to the memory mapping of "Os enabled, basic disabled", so
it works well in the initial reset phase. However, during coldstart, the
Os/A initializes PIA (and all other chips) by writing zeros in all registers.
To keep it short: During a short while the PIA pins become outputs, output
zeros and pull the Os disable pin of the MMU low. Which means that the Os
will go away in the middle of the coldstart routine of the Os. Well, "this
ain't work", clearly.

b) The timing between the US (NTSC) and PAL versions are different. The XL
Os checks for the chips, and initializes the timings accordingly. This might
not be a major problem and shouldn't prevent booting.

c) RESET is routed differently. For the XL, the reset button goes really to
the reset pin of the CPU, for the first series, it goes to the NMI input
pin of Antic. The Os/A then detects this interrupt and jumps into the
warmstart vector of the Os. Thus, pressing reset on an XL system with an Os/A
rom installed will run a coldstart of the system, not a warmstart.

If I may make a suggestion: "Don't do that". There are good software versions
available that load a (mildy patched) verison of the Os/A into the RAM under
the Os ROM. 'mildy patched' in so far that the PIA initialization that

mangles the Port-B setup is stripped off and replaced by a couple of NOPs.
If you really want to do that, you need to patch the Os accordingly to
make it working on the XL system. It won't work unpatched.

> One thing I noticed is that the blank screen is exactly the same one
> when I boot the XL without any OS...

Yes, and for the same reason: The Os goes away. Or rather, it pulls the
rug under its own feet in the middle of the bootstrap code. (-;

Sounds like they used the one layout for all except the Arabic version.

UK/German ones used PAL, French used SECAM.

However, it would not be to hard to implement a different keyboard layout,
only the look-up tables would need changing I guess.

> PAL..
> there is a second oscillator that runs at 5/4th the main clock

IIRC the NTSC used a single 4xNTSC colour carrier crystal (14.318... MHz).
This was 8 x the CPU cycle rate of 1.789,772,72 MHz.
Usually quoted as 1.79 MHz.

The CPU rate on the PAL systems was usually quoted as 1.77 MHz.
I'd always assumed this to be 1.773,447,5 MHz, which is one tenth of a 4xPAL
colour carrier crystal (17,734,475 MHz).

However my late-model 800XL has two crystals as you said:
Y1 = 14.875576 MHz Video timing crystal
Y2 = 14.18758 MHz (3.2*PAL colour)

I'm guessing Y2 went to a PLL to be multiplied by 5 and divided by 4 to get
the 4xPAL colour carrier.

The reasons for the frequency of Y1 are a mystery:
it has no obvious ratio with the PAL carrier or NTSC.
Multiplied by 5 and divided by 42 would get 1.7709019... MHz.

Perhaps they should have just stuck with the 4xNTSC crystal for the CPU
timing.

What is the real PAL Atari CPU cycle rate?

D'oh! My mistake.

I think I misread the crystal legends.

I think the exactly correct values should be:
Y1 = 14.18758   MHz (3.2*PAL colour)
Y2 = 4.43361875 MHz (1 *PAL colour)

The two values above based on
4 * PAL colour carrier being 17.734475 MHz

I also thought this was the case until somebody posted he did that
successfully. Then I gave it another thought and I now don't see why it
won't work ...

No. By writing all zeros, they remain as input.

You are right about the coldstart issue, you can't get a warmstart by
pressing the reset button. And you obviously, cannot enable/disable basic
with the Option key. But they are minor problems. The OS unpatched should
work.

His problem, I believe, is he is putting the old 10k OS at the start of
the 16K eprom, and he should put it at the end.

Yeah, I noticed that. Looked like a large PC style joystick. Pretty wacky.

(Reposted just in case)

Hi

I think Jorge has got a point here.
I use a software called the EPROM3 for burning the EPROM. Take a look:

http://img.photobucket.com/albums/v660/lbaeza/Other/eprom3.jpg

As you can see, this software puts the contents of the 400/800 OS
binary file at the beginning of the buffer. I'm pretty sure there must
be an option within the software that could let me put the contents of
the binary file wherever I want within the buffer...

Any ideas what's this option?

Regards

PS: By the other hand, does it work if I fill with zeroes the beginning
of the binary file, so that the content of the 400/800 OS stays at the
end of the 16KB file?

I've been looking for some online archives of old Atari Magazines that are
no longer in print or available by any other means. Specifically, I'm
looking for an article by Dave Small that was published in the
December93/January 94 issue of "Current Notes".

The article was titled, Small's Second Law, and it is about the chaotic
nature of data storage and the universe we live in. If anybody knows where
I might be able to find an online copy of this article, I'd be most
grateful.

Thanks,
William

I love reading what that man wrote. He also wrote a short story that was
published in Current Notes, I thought it was awesome.

Wish I had all of the Current Notes mags I used to have. They got
lost/destroyed over time, and man....I miss them them, all of them, now.

  :-(

PS Heck, you know, I even wrote 2 articles for Current Notes. :-)

   On Tue, 2 Aug 2005 at 00:16 -0500, Slor scribbled:
->Anyway, thought I'd put my 2 cents in about the show. Hope to see
->more stuff coming to the Indianapolis area in the future. Hint,
->hint to you organizers out there...

   Uh, where were you from the late '80s to the mid-'90s? There WAS
an annual Atari computer show in Indianapolis for almost a decade.
I was at several of them, including the final show in 1997. About
100 people attended that year, which I thought was fairly good tho
not spectacular. It also didn't have the same flavor as in previous
years when there were abundant displays by vendors selling various
kinds of new stuff. The organizers labeled attendance as adequate
but they refused to organize the show again. They publicized that
show as the final one in the series, saying they wanted to end the
series while it was still successful rather than have it trail off
in a downward spiral.

   Since then the Columbus, Ohio, swapmeet has been the only mainly-
Atari, annual event I've seen announced here on this 8-bit newsgroup,
and which has continued to be held every year. This year's holding
is coming up next month, on September 10.

->I placed this EPROM into the XL and voila! ATARI MEMO PAD on my
->XL! ... Worse, I put back the original XL OS and the computer re-
->fuses to launch. It seems it's dead :-(

   You posted this update before I got a chance to submit my two
cents' worth, so here it is: Next time, wouldn't it be simpler to
just run the translator disk!? It would make your XL run like an
800 without having to kill it! BTW, there are easier ways to turn
8-bits into doorstops without having to devote all the time and
effort you did. <grin!> For example, on a 130XE just jiggle the
plug end of the daisy chain cable. That kills the computer real
fast! <groan!>

    Here's another reminder for the upcoming swapmeet in Columbus,
Ohio, on September 10:

Date: Sun, 5 Jun 2005 14:05:54 -0400
From: R. Wayne Arenz
Subject: It's close to that time again; ACEC Swap Meet

Here's the easy way to get the information folks:

http://www.angelfire.com/oh4/acec/acec.html

In short, the Swap is Sept. 10 this year. See you there!

R. Wayne Arenz

Up for auction is my original ATARI VIDEO MUSIC that I purchased in the
late 1970s. I bought this from a stereo shop in Denver for parties. The
undulating patterns passified most the stoners who didn't want to get
up off the sofa and mingle or dance. It can be truly mezmerizing. You
hook up your music to the TV and patterns formed to the beat and volume
of the music! This has been sitting in my closet since the early 80's
and is in nice overall shape. This item is has been tested and works
perfectly. I do not have the RF adapter (Cord out of unit is an RCA
jack which puts out an RF signal, not video. Needs to do RCA- RF
screw-in connection into cable or TV input) which you can buy on eBay
or at your local RadioShack!

I'm including the original glossy manual which is stapled together at
the upper corner.

Fair question. :) That period was prior to my interest in classic systems.
Matter of fact, that would cover the time I sold most of my original Atari
stuff for a song... Wasn't until 3 or 4 years ago that I really caught the
fever and started working on re-acquisition.

Sounds like one I should hit. Any further specifics?

Hi

I'm impressed on how long did the XL last. You see, this was the
machine where I made a lot of experiments. First tried a MYIDE internal
setup: to accomplish this, I had to desolder the XL OS, install a
socket, and place the MYIDE OS internal version. After all this
desoldering I thought the machine didn't survive. But it did! Next I
soldered my MYIDE setup inside the XL, but with no success. Later I
discovered I didn't solder the cables to the CPU, but to a chip next to
the CPU. After all this mess, the machine *still* survived!. Finally I
went on all this OS exchange issue: desoldered the BASIC chip, switched
OS's, and when finally it looked like it worked, the machine died.

I'm really impressed on how robust old hardware is. They don't do
machines like that anymore...

Regards

PS: I think I learned a lot with this machine. It was worth it.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

The charm of atari is that all the support comes from users and not the
corporation. That is what makes the atari community so special.

IMHO--

As I've been reading more and reviewing notes from previously asked questions, I'm trying to get a good feel any major issues that prevent some software from working properly with the current 8-bit emulators. For instance, I attempted to run a program from the Atari Graphics and Arcade Design book in an emu, and it crashed. I haven't tried it yet, but I'm sure it will run on the real machine. I have seen mention of other demos and games that spell out "this will not work in an emulator". So, does anyone happen to have a short list of the most common reasons? Are they related to incomplete emulation, failure to properly emulate cycle timings, etc.?

In my development, I intend to support the lowest common denominator as much as possible (likely dependent mostly on memory requirements), and I want to make sure I don't cross any boundaries of emulation unfriendliness as well.

thanks

My demos use too much of the VBI and DLI, so I guess it's timing problems
mainly on demos. I still hope for an emulator that can run my demos, which
seems like they're done by a drunk man on an emulator.

How is the coding going? Hope all is well on it's way!

Take Atarian care

   That's like saying "The charm of Studebaker (or Hudson or MGB or
DeSoto or whatever) is that all the support comes from users and not
the corporation." Would Apple users be better off if the Apple com-
pany folded? Of course not. "Charm" is one thing, but it doesn't
hold a candle to having the real company in business supporting the
products.

->[I] was wondering if there are any patterns anyone in this NG
->has developed for the 8-bit Pac-Man cartridge?

Dunno about the 5200 version, but I can comment on the 8-bit computer version. I never discovered any sure-fire patterns in the same sense as the arcade game. The only thing you can do is apply similar concepts, methods, and tricks based on general Pacman experience and knowledge.

The biggest difference is that the maze is longer horizontally in the home computer version, whereas the arcade screen is (or was) oriented vertically. On the home version you have to be more careful in clearing the "danger zones" at the bottom of the maze because it takes longer to reach a point to safely exit at. That gives the ghosts a better chance of trapping you.

Also, in the arcade game it's easy to hover at one end of the tunnel and lure all four ghosts in behind you; while they're slowed down you zip out the other side. I found that this can't be done anywhere as easily on the 8-bit computer version.

The 8-bit computer version of Ms. Pacman is much more true to the dynamics of the arcade version.

Apple users wouldn't be better or worse off either way if Apple Corp folded,

however, Macintosh users might have a bad time of it if they did. The Apple
II
line was abandoned by Apple Corp in the mid 90's, and haven't been in any
way
supported except for a few pieces of crucial system software still on their
site
under the obsolete list.   :o)

Today is the Classic Computer Magazine Archive's ninth birthday.
It launched July 27, 1996 (it was called Digital Antic Project back
then) with two issues of Antic magazine.

Today it has more than 6,000 articles from Antic, STart, Creative
Computing, Compute!, Compute II, Hi-Res, Creative Computing Video &
Arcade Games Magazine, and Tandy Whiz Kids comic books.

Thanks to the volunteers and contributors who have done so much work to
make the site one of the best electronic archives of classic computing
material.

Hello,

I have many boxed ATARI 2600/7800 games, most of the new :

PAL Games : 1.50 Euros each

Astroblast (Telegames, PAL) www.vectrex.de/c/astroblast.jpg
Big Bird's Egg Catch (CCW, PAL) www.vectrex.de/c/bigbird.jpg
Cookie Monster Munch (CCW, PAL) www.vectrex.de/c/cookie.jpg
International Soccer (Telegames, PAL) www.vectrex.de/c/intsocc.jpg
Kung Fu Superkicks (Telegames,PAL) www.vectrex.de/c/superkic.jpg
Pick 'n' Pile (SALU, PAL) www.vectrex.de/c/pickpile.jpg
RealSports Tennis (ATARI,PAL) www.vectrex.de/c/rstennisp.jpg
Super Breakout (ATARI, PAL) www.vectrex.de/c/superb.jpg
Super Challenge Football (Telegames, PAL)
www.vectrex.de/c/football.jpg
World Championship Baseball (Telegames, PAL)
www.vectrex.de/c/wsbase.jpg

PAL Games : 2.50 Euros each

Bogey Blaster (Telegames, PAL) www.vectrex.de/c/bogey.jpg
Chess (PAL) www.vectrex.de/c/chess.jpg
Mission 3000 (BitCorp, PAL) www.vectrex.de/c/mission3000.jpg
My Golf (HES, PAL) www.vectrex.de/c/mygolf.jpg
Title Match Pro Wrestling(Absolute,PAL) www.vectrex.de/c/title.jpg
Tomcat (Absolute, PAL) www.vectrex.de/c/tomcat.jpg
Weltraum Tunnel (BitCorp, PAL) www.vectrex.de/c/wtunnel.jpg

NTSC Games : 1.50 Euros each :

RealSports Football (ATARI,NTSC) : www.vectrex.de/c/rsfootvc.jpg
RealSports Tennis (ATARI,NTSC) : www.vectrex.de/c/rstennis.jpg

RealSports Volleyball(ATARI,NTSC) : www.vectrex.de/c/rsvolley.jpg

NTSC Games : 2.50 Euros each :

Galaxian (ATARI, NTSC) : www.vectrex.de/c/galaxian.jpg
Pole Position (ATARI,NTSC) : www.vectrex.de/c/polepos.jpg
Jungle Hunt (ATARI,NTSC) : www.vectrex.de/c/jungle.jpg

ATARI 7800 PAL : 1.50 Euros each

Mat Mania Challenge (ATARI,PAL) : www.vectrex.de/c/mat.jpg
Sentinel (ATARI,PAL,Lightgun only) : www.vectrex.de/c/sentinel.jpg

ATARI 800 XL/XE NTSC (PAL compatible) cartridges 2,50 Euros each :

Ballblazer (ATARI)   : www.vectrex.de/c/ballblaz.jpg
Crossbow (ATARI)   : www.vectrex.de/c/crossbow.jpg
Hardball (ATARI)   : www.vectrex.de/c/hardball.jpg
One on One (ATARI)   : www.vectrex.de/c/oneonone.jpg
Pole Position (ATARI) : www.vectrex.de/c/polexl.jpg
Star Raiders 2 (ATARI) : www.vectrex.de/c/starrai2.jpg
Tennis (ATARI)   : www.vectrex.de/c/tennisxl.jpg
Thunderfox (ATARI)   : www.vectrex.de/c/tfox.jpg

Hardware :

4 Euros each (2 units in 1 box) :

CX-50 Keyboard Controllers (ATARI) : www.vectrex.de/a/keyctrl.jpg

2 Euros :

Sears Paddle/Joystick Combo   : www.vectrex.de/a/paddle.jpg

Most of the games are boxed and new, sealed.There are huge qts. of
these games available, usually 50 or more copies.

These games are great for resale or for homebrewers who need empty
cartridge shells.

Telegames cartridges contain 4K or 8K EPROMs, this may be interesting
for homebrewers.BitCorp games contain 4K EPROMs.

I can sell the games OR trade for ATARI 2600/7800, ATARI ST, ATARI 800
XL/XE, Commodore 64, AMIGA, NES, Gameboy, ATARI Lynx, Colecovision,
SNES, Intellivision, MS DOS or other games.

I can ship worldwide and I accept paypal.

Shipping depends on the final weight, it's 12,90 Euros for up to 15
games, 32 Euros for up to 40 games and 62 Euros for up to 150 games.
In Europe, shipping is 8,60 Euros for up to 16 games, 17 Euros for up
to 40 games and 32 Euros for up to 150 games.

If you're interested, please write to my email-Address.

MG

There have been several threads in csa8 about using a single board computer as a dedicated APE/SIO2PC "server." Although there are lots of possible hardware systems for doing that, I've found a very useful and economical machine -- namely the Toshiba Libretto. There is a lot of information on the web about the U.S. Libretto 50/70/100/110 series.

The Libretto is a "palm top" computer that is about the size of a VCR tape. (Talk about compact!) A "stock" model 50CT uses an original Pentium processor running at 75 MHz. Since the 50CT is the oldest US-released Libretto, it is also the least expensive, but it runs APE for Windows 95/98 flawlessly under W95 SR2 in 16 MB. I am using a very early (registered) version of Win-APE, V1.1.0 with a 1-chip Max232-type interface. 3X transfers are no problem, and printing also works great. A "true" 14C89 interface also works well. Some of the APE "Options" boxes are slightly wider than the nominal 640 X 480 display, but the

L50 has larger virtual displays, and nothing "crashes" when the box overhangs the display -- just "grab" and "slide" it. The main APE display fits nicely. Newer versions of the Libretto (100CT and 110CT) have a wider 800 X 480 display.

There have been a couple of mentions in csa8 about trying to use the Atari Portfolio with APE/SIO2PC for Dos. I started looking at this APE-server project when I ran across a Poqet computer on eBay; then found another MS-DOS candidate in the HP LX "palm-top" series. But the Libretto is a true Win Machine (also prized by Linux users), with a TFT color VGA display, and Pentium power. Easily runs W95 and also W98 SE (in 32 MB).

Since I got mine, I've moved many ATR's to it and used it quite a bit. And If anyone is interested in the L., I'll be happy to share what I've learned.

   Nice thing is about IBM palm tops is that there are a lot of them.

   The one I found myself using was a Digital HiNote. Now that is not as small, but small non-the-less. ;)   And this one was dos based.

    Interesting mention that in the new Charlie & The Chocolate Factory movie,
    the "Television Boy" who is into television and violent video gaming is
    shown to be playing on an Atari 2600 with a game that has PS3 graphics or
    something. :) But non-the-less it is a 2600 that they have there as his
    game system.

There are other differences in the character codes. Backspace, bell, cr+lf are
one code, 155. Codes above 127 are mostly inverse video.
The Atari 8 version of Ansi is "Atascii". Using the cursor codes in the 0 to 31
range lets you put text where you want, almost. The only special text thing is
inverse. The Welcome FAQ here may list the codes. Computes Mapping the Atari
has them. I have a pretty 2 sided card I make that I can post if desired.

40 columns is usually best. Most people and term progs will use it. And keeping
it 40X25 keeps the screen from scrolling or messing up.

Hi All,

Ok, I did it. I went and got batteries for the 130xe portable. I hooked up 3 batteries for RC cars and tested to see how long the batteries last... 2+ hours!!!. The batteries had not run out! I had to stop the machine to pack it for Saturday. I would not be suprised if it ran for 3-4 hours on a charge... WOW. I was expecting 45min-1hr MAX...

Julian & I will be at the VCF in West Layfayette, Indiana this Saturday and we'll be exhibiting a PDP/11, IBM RS, the Atari 130xe portable running on batteries, and my Rack mounted Falcon030 w/CT63. We will be in the exhibit booths. I can take orders for ethernecs and eiffel board there if needed. We will be taking pictures and posting them at a later date for those interested.

Rory

Hi Greg-
Which model HiNote? Presume this is the Compaq HiNote series?
Incidently, another petite sub-notebook that I considered was the
Compaq Aero, but evidently Compaq quit that series after releasing the
486-33 model.

I'll be at the VCF tomorrow as well. Anyone else? If you see a guy with a
blond goatee and tan Mardis Gras hat, feel free to say hello. I don't have
much cash right now, but I'm looking forward to the show nonetheless!

Thanks Rick. I'd appreciate it if you could post or e-mail me the codes on your card. :-)

Here's what's in the FAQ:

Subject: 7.2) What is the ATASCII character set?

ASCII is an acronym for the American Standard Code for Information
Interchange. Pronounced ask-ee, ASCII is a code for representing English
characters as numbers, with each letter assigned a number from 0 to 127. For
example, the ASCII code for uppercase M is 77. Most computers use ASCII codes
to represent text, which makes it possible to transfer data from one computer
to another.

The 8-bit Atari computers use a modified version of the ASCII character set
called Atari ASCII, or ATASCII.

David Moeser produced this nice translation table.
Piotr Fusik corrected the description of Atari character 5.

        ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)
        ==

        SECTION ONE: CONTROL CHARACTERS
        ===============================

DECIMAL -HEX	NAME	ATARI KEY	IBM <----> ATARI GRAPHICS CHARACTER		ASCII FUNCTION
0 00	NUL	^,	none	heart	Null
1 01	SOH	^A	smiley	|-	Start of header
2 02	STX	^B	[smiley]	right |	Start of text
3 03	ETX	^C	heart	(9:00)	End of last text
4 04	EOT	^D	diamond	-|	End of transmission
5 05	ENQ	^E	club	(9:30)	Enquiry
6 06	ACK	^F	spade	/	Acknowledge (handshake)
7 07	BEL	^G	rain dot	\	Bell
8 08	BS	^H	doorbell	L triangle	Backspace
9 09	HT	^I	o	low-R-sq.	Horizontal tab
10 0A	LF	^J	[doorbell]	R triangle	Line feed
11 0B	VT	^K	Mars	hi-R-sq.	Vertical tab
12 0C	FF	^L	Venus	hi-L-sq.	Form feed
13 0D	CR	^M	note	high bar	Carriage return
14 0E	SO	^N	2 notes	low bar	Shift out
15 0F	SI	^O	sun	low-L-sq.	Shift in
16 10	DLE	^P	R pennant	club	Data link escape (break)
17 11	DC1	^Q	L pennant	(3:30)	Device #1 (P:)
18 12	DC2	^R	V arrows	--	Device #2
19 13	DC3	^S	!!	cross	Device #3 (deselects P:)
20 14	DC4	^T	paragraph	cloudy	Device #4 (stop)
21 15	NAK	^U	section	low block	Negative acknowl. (error)
22 16	SYN	^V	short -	left |	Synchronous idle
23 17	ETB	^W	base-V-arrs.	low T	End of block
24 18	CAN	^X	up arrow	hi perp.	Cancel memory (in buffer)
25 19	EM	^Y	DN arrow	left half	End medium (tape drive)

27 1B	ESC	EE	L arrow	escape	Escape
28 1C	FS	E^-	(3:00)	up arrow	File separator
29 1D	GS	E^=	ice needles	DN arrow	Group separator
30 1E	RS	E^+	up triangle	L arrow	Record separator
31 1F	US	E^*	DN triangle	R arrow	Unit separator
32 20	SPC	bar	space	space	Space

SECTION TWO: SPECIAL CHARACTERS

127 7F	DEL	ETB	home plate	R pennant	Deleted
155 9B	EOL	RETURN		box, etc.	Atascii end of line
		(only at end of paragraphs or last column for data)			
13,10	EOL	ENTER	^M^J		IBM end of line
		(at end of every 80-column screen line)			
13	EOL	ENTER	^M (or ^M and null)		Unix end of line

KEY TO ABBREVIATIONS:

^ = control key	L = left	hi = upper
S = shift key	R = right	low = lower
E = escape key	UP = points up	[ ] = inverse

BS = backspace DN = points down V = vertical
TB = tab key sq = square perp = perpendicular
(time) = position of hands on a clockface

Where possible, descriptions of graphics characters are taken from standard symbols used in mathematics, weather, astronomy, etc. Note: Different computer platforms, operating systems, programs, printers, etc. will produce different graphics characters.

SECTION THREE: KEYBOARD CHARACTERS

DECIMAL -HEX	IBM KEY	IBM CHAR.	ATARI KEY	ATARI CHAR.	DECIMAL -HEX	IBM KEY	IBM CHAR.	ATARI KEY	ATARI CHAR.

Wow. Thanks Michael. Looks like I've got some experiementing to do, as
soon as I get some free time. :-)

UPDATES SINCE PREVIOUS POSTING:
2005.07.03 Shawn Jefferson, MyIDE Image Manager v2.1, MyIDE Config v1.1
2005.06.17 TAQUART updated
2005.06.17 added Marcin Lewandowski (Jaskier/Taquart) - TMC 2.0
2005.06.16 Raphael Espino, CpegView 0.1 (30May05) - color JPEG viewer
2005.06.16 added: AtariArchives.org (Kevin Savetz)
2005.06.01 removed Rich "Twist" Lawrence (former developer of Atari800Win)

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication

title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web address.

No email addresses are listed due to spam consequences.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

   Mine is a Digital HiNote Ultra CT450. Runs at 75 mhz.   The batteries are
   expensive as hell to get, but I just leave the laptop plugged up, and simply
   put it to sleep by closing the screen when not using it.

   As for the Aero... played with those. They have to be the most confused
   computers... too big to be a palm top, too small to be a laptop. :D

   They are quite small in other words. Never could get it work right, but
   then the poor Aero I had was through a lot previuosly. They have the
   coolest floppy drives that plug into their PCMCIA port... loved the design,

never could get that to work either. But the drive is somewhere around here still just because of how cool it was. :)

Hey Rory,

Gee, I did not know the portable 130XE was running on batteries. Cool.. Can you also use regular current for it? I will not be at the VCF. I am off, but I forgot that I had laready promised my wife I would go with her to a party that night. I inivitation came in early June. There will be others I hope. You guys, SCAT, had a great setup and you should all be proud of it.

I haven't turned my Atari system on for more than a year. Well, actually,
I did turn one briefly, a few months ago to test some ROM chips that I
shipped out.

Well, it looks as though I will be setting up my 8-bit Atari again this
weekend. I miss playing with the little critters.

Atari Basic was my first true love. The things we used to do together
sometimes brings a tear to my eye as I recall the days when computers were
fun. Not so anymore; computers don't have that same aura of intrigue that
they once had. At least not for me.

Who sits down in front of their Mac, PC, or Linux box, boots up the OS and
tinkers with computer languages just to have software to run on their
computers today? Not many.

Could you imagine what modern computer magazines would be like if they came
with type-in program listings? They'd be books!

When I had my ST, there was a paint program for it that I really liked

called "Neochrome". I've never seen anything like that program on the Mac or the PC. I'm not at all grapically inclined, but I would spend hours playing with Neochrome.

In high school a friend and I set out to develop a game for the ST called, Elevator Music. Most of the graphics were created with NeoChrome and we were using the STOS programming environment for the code. I really wish that we had been able to finish that, but sh*t happens, right?

Anyway, ciao...

I had always wanted an Indus drive for my 8-bit. The sleek black case, the seven-segment LED displays that showed information like track count, the little flip lid over the drive slot, all were things of beauty to the truly inspired computer geek.

I never did manage to scrounge up the coveted Indus drive for my Atari 800XLs. In many respects, the Indus drives were much like sasquatch or any other creature of lore; a few people had claimed to have seen them in these parts, some even had pictures to prove it, but no one had ever managed to bag the beast.

I did manage to procure an old Rana 1000 drive for my 800XL many years back. This drive had many of the same features as the Indus drive albeit without the slick black case, flip cover, and stealthy design. Regardless, the Rana drive was a truly inspired piece of technology at the time. It offered true double-density, something that every Atari branded disk drive lacked, and the front panel displays were a computer geeks dream come true.

The USDoubler upgrade for the Atari 1050 disk drive was the first and only upgrade to have ever graced the innards of my Atari drive. Finally, true double density on my 1050 had become a reality and the UlraSpeed sector skew, made possible with SpartaDos, made the 1050 really fly.

Ah, those were the days...

At least offer a correction with your criticism. It isn't a phrase, but a
single word.
"Nonetheless" is a word meaning, "nothing taken away". I have noticed some
small
errors in term usage in your posts as well, not to mention your
"top-posting". :o)

Sorry, Bill and Greg, I guess I should have used a smiley in that message.
It wasn't my intent to point out the error in spelling, just the redundant
usage. It was meant to be a joke, something along the lines of: Today's
messages brought to you by the word 'non-the-less'.

Although, in my defense, you will probably note from my various posts that
I'm not yet up to speed on ascii smiley usage. I'm getting there though.
:-)

I have always said that my Atari 8-bit days were the best in computer
experience I have ever had. I actually wish we could all go back and do it
again.

>Who sits down in front of their Mac, PC, or Linux box, boots up the OS and
>tinkers with computer languages just to have software to run on their
>computers today? Not many.

I started to tinker in Atari Basic and only wrote one program. It was small, but I was a little pround of myself. It was a menu program that I used to load in programs that were on a disk. I hated to have to type in the program name all the time. It was great to experiment just to see what happens. You are correct, no too much of this happens these days.

>Could you imagine what modern computer magazines would be like if they came
>with type-in program listings? They'd be books!

Yeah, even some of the best programs listed in the old Antic magazine seemed like books, but they were worth it when it was all typed in. Of course I found the more I typed in the programs, the more I learned about the language.

>When I had my ST, there was a paint program for it that I really liked
>called "Neochrome". I've never seen anything like that program on the Mac
>or the PC. I'm not at all grapically inclined, but I would spend hours

Yes, I still have that program. Great piece of work. I used it along with Degas Elite, also which I still have.

>In high school a friend and I set out to develop a game for the ST called,
>Elevator Music. Most of the graphics were created with NeoChrome and we

Yeah I bought STOS and a lot of other programs to help program, but I never got into it like I thought I would Too bad, but maybe someday I will start it up again.

Not a problem. At least you're big enough to apologize and explain yourself.

:o) This is the smiley I use, the cute bear face smiley.

David:

I'm curious as to the story behind your signature tag. Did you find
yourself being muzzled for having exercised your right to freedom of speech?

That's what happened to me! Although, I live north of the Canada/USA
border and we actually have laws that restrict what a person can say. We
call them hate laws and they carry precedence over our Charter of Rights.

Now, please don't misunderstand, I was *not* spewing hate propaganda, unless
being critical of a corporation could be construed as hatred? Anyway, I'm
curious about your signature tag...

I wrote many programs for my Atari 800XL. I don't know how many 5.25"
floppy disks I have laying around, but I'd hazard to guess that I have at
least 25 to thirty disks filled with nothing but Atari Basic code that I
conjured from the depths on those warm and hazy summer nights.

I'm not saying that any of my code was particularly good, I'm just saying
that there was an abundance of it.

A friend of mine once made an attempt at starting a small business selling
Atari 8-bit public domain software and I wrote the code for his disk-based
catalog. If you have ever been involved with a user group that received a
copy of the SnoSoft Public Domain catalog, you will have had experience with
one of my early Atari programming projects.

Cheers,
William

I laughed on the mention of the current magazines being books if they had programs in them. That is too true. Most cases they only list sample code or partial code if they ever do. Most codes you get are cheat codes.

So what kind of setup did you setup? :)

I think I remember Neochrome for the ST. It is amazing what I remember from the year or so I collected and worked with ST's. :) As it is of course O don't remember much. Had to much fun getting my Atari ST on the internet.

>  13,10    EOL  ENTER  ^M^J                  IBM end of line
>               (at end of every 80-column screen line)
>  13       EOL  ENTER  ^M (or ^M and null)   Unix end of line
```

Correction here: The *ix code used for "end of line" is LF, hex 0x0A,
decimal 10. 13 aka CR is (or has been) used by the old MacOs versions.
Given that MacOs X and above are built on top of a *ix style operating system,
I would believe that they also use LF now.

Greetings,
     Thomas

Hi folks,

please find a new release of the Atari 8-bit emulator for Linux
and win32 on my web page on its usual location:

http://www.math.tu-berlin.de/~thor/atari++/

What's new in this release?

- Too many people complained about sound problems; the main
problem was a DC offset in the pokey output that too easily
causes trouble with some sound cards and amplifies. This

release fixes this issue by an (optional) high-pass filter.
- The 1.43 release integrates a new optional host-system
based RS-232 (R:) handler that does not require the usual
HANDLERS.SYS bootstrap code, but can be patched into the Os
to begin with. Note that you still need to enable the 850
interface box to use it. The old bootstrapping code remains
available for backwards compatibility.
- Keyboard emulation did not check for the pokey keyboard
disable bit.
- The emulation of the Atari/InverseVideo key was broken.
1.43 fixes this.

So long,
     Thomas

   On Fri, 29 Jul 2005 at 20:28 -0500, Michael Current scribbled:
->David Moeser produced this nice translation table.
->Piotr Fusik corrected the description of Atari character 5.

   Thanks for the mention. I wish I had time to do stuff like that
nowadays! <grin> As for ATR char 5....

-> DECIMAL   ATARI   IBM <----> ATARI   ASCII
->   -HEX NAME KEY   GRAPHICS CHARACTER   FUNCTION
-> ======= ==== === ====================== ========

->   5 05 ENQ ^E   club   (9:30)   Enquiry

....I looked up my original text and yes, it said 8:30, not 9:30.
While I'll admit that "9:30" as a description may meet with more
popular favor, I would quibble with both. On an old-fashioned,
"analog" clock (round-faced, with hands pointing to numbers), both
8:30 and 9:30 are "wrong" since the hour hand points to the area
in between the two numbers when the minute hand reaches the half-
hour mark. Neither one is precisely accurate. Both are compromises
in one direction or the other.

   Perhaps the reason I used 8:30 was to more clearly differentiate
it from Atari character 125, which might be called "10:30." When I
used that character back in the days of Atari Basic programming, I
had always whimsically referred to it as the "left-turn arrow."
The position of clock hands at 9:30 could also be used to describe
a left-turn traffic sign.

   In any case, any corrections are welcome.

   On Sat, 30 Jul 2005 at 16:23 -0400, "You" scribbled:
->... all were things of beauty to the truly inspired computer geek.

   You deserve a nomination for poet laureate of the Atari world!
<grin> Actually, the things you mentioned, the built-in true double
density, and above all a reputation for quality, caused my computer
mentor and me to go with the Indus as our first floppy drives in
early 1984. That was in spite of the high price: US$350 at that
time, which would be equivalent to almost US$700 in today's money if
adjusted for inflation.

->I never did manage to scrounge up the coveted Indus drive for my
->Atari 800XLs.

   I don't know where you're at but I would say that back in the
glory days of the '80s Induses were fairly easily found at computer
shows, Atari computer club auctions or sales, and of course at all
the computer stores that sold Atari hardware. In the '90s used
Induses could still be found at hamfests and computer shows and at
those events that still existed within the Atari community.

   On Sun, 31 Jul 2005 at 21:21 -0400, "You" scribbled
->I'm curious as to the story behind your signature tag.

   Oh, you mean "Censornati"? <ha-ha> Back in '95 some wag plant-
ed a sign saying that alongside the interstate highway near down-
town. That was back in the days when our longtime resident crusading
sheriff-and-prosecutor-and-sometime-judge raided and closed down the
biggest local computer bulletin board sysop, who was accused of hav-
ing nine "adult" computer files available for downloading out of some
70,000 files stored on his BBS. Driving that BBS out of business was
the last great victory for our caped crusader, after an illustrious
career of decades of keeping Censornati "squeaky-clean" of any adult
bookstores, video stores, movies, or even stage shows. There was just
one slight problem for the caped crusader: the internet took off like
a rocket at the same time he crushed that BBS, and so with the wide-
spread availability and pervasiveness of smut now having become ubi-
quitous, the whole issue became moot. But I try to do my best to
see that the Censornati name lives on. <grin>

   On Sun, 31 Jul 2005 at 21:32 -0400, William a.k.a. "You" scrib-
bled:
->I'd hazard to guess that I have at least 25 to thirty disks filled
->with nothing but Atari Basic code ...

   When I got my 8-bit I spent the first year and a half working on
a huge Atari program that never got finished, much less published or
distributed. There were other programs as well that never saw the
light of day, as far as any public distribution was concerned. Pro-
gramming was one of the highlights of "home" computer usage in those
days of 40 columns and cassette recorders, not to mention 110 baud.
It filled the time that didn't go into playing video games! <grin>

   On Mon, 1 Aug 2005 at 08:06 -0000, Thomas Richter scribbled:
->Correction here: The *ix code used for "end of line" is LF, hex
->0x0A, decimal 10. 13 aka CR is (or has been) used by the old MacOs
->versions. Given that MacOs X and above are built on top of a *ix
->style operating system, I would believe that they also use LF now.

   I think the reason I put that description into the table was be-
cause of user experience in the Unix environment, where I probably
found that ^M (ASCII 13) by itself worked best to produce the re-
sult that on the Atari 8-bit was produced by ATASCII 155. But I'll
take your word for it.

110 baud? I didn't start using a modem until 1200baud became fashionable. Not that I know anything about fashion, but damn, that Atari SX212 was a mighty fine looking piece of equipment. It seemed out of place with my 800XL, 1010, and 1050 disk drive though. When I got the XMM801 printer for my birthday, the SX212 modem seemed to fit right in.

Not long after I was granted printing abilities by virtue of the Atari XMM801 dot matrix printer, it became evident to my parents that the SX212 modem would have to go. The SX212 modem was just too slow and phonecalls to Detroit were just too expensive; there was no long distance carrier competition in Canada at the time and no boards that supported Atari 8-bits locally.

Always one to recognize a blessing in disguise, I soon realized that I could print up the documentation for the heaps of files I had downloaded from various Michigan based Atari bulletin boards and begin really using that software. I fiddled with the idea of setting up my own BBS but I would have no luck in getting my parents to sponsor a second phoneline installation at the homestead. In an ironic twist, I managed to sell my modem to a local person that I met on a local BBS and we remain friends to this very day.

I've seen many friends come and go over the years, but of those for which I still count upon as friends, they were all met in the days of Atari 8-bit computing.

Greg:

I know exactly how you feel. I sometimes go days with just that one word
at the forefront of my mind: Huh?

And just like you, I smile when I realize the absolute absurdity of the
whole thing. :)

Cheers,

William

Pictures of the show I took. It was a small show, but I thought it
was pretty good. It was nice in that I could actually walk around and
talk/look. Met some people/made some sales. Ate some food. Gave
away a refurbed NES, gift certificate for my site ($10), and AtariMax
donated a 1MB MaxFlash cart.

And now you easily play emulators on the PSP with the KXploit tool. I
have a NES emulator (NesterJ) on my PSP (has the 1.50 BIOS) with a
sh**load of games, including some Famicom Disk System games (you need
to have the Famicom Disk System BIOS, and it has to be named
disksys.rom).

Now if someone would just develop an Atari 2600 emulator for the PSP
(or a combo 2600/7800 emulator for the PSP).

I tried to learn some about this. There is an
article in the first issue of Antic about what
I think you're talking about called 'Multi-tasking
in Forth" by Bob Gonsalves. The article describes a version of Forth that
allows making
VBI routines that can be used with other languages. As far as I can
determine, it envolves a disk of fig Forth that contains the
routines, a disk from Pink Noise Studios (pns).
I haven't been able to find this Forth boot disk.
I found 5 fig Forth disks, but none of them contain the VBI creating
routine.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

Interesting, that's the exact same location as SWRAP2003!
(www.swrapexpo.org)   Just coincidence, or are there some common organizers?

I heard that SWRAP2005 might be moved back there, have they decided?

Not sure if this opens the door to an 8-bit Apple II and Atari 800
version of HLA Adventure, but...

HLA ADVENTURE for the Commodore 64
Ported from the .Z5 version by Paul Panks and Roger Pepitone

It took me awhile to figure out how to do this, but I think the game
now works on the Commodore 64/128!

Run the first disk side FIRST, then it will prompt the user to insert
the second disk. Do so and follow the game prompt. Type 'help' at the
command prompt for a list of game commands.

This was ported directly from the .Z5 version of the Windows and Linux
versions of HLA Adventure. It doesn't quite display elegantly in
40-column mode, but it doesn't look bad, either.

The game data file is very large -- in fact, if you're running this in
VICE, be sure that TRUE DRIVE EMULATION is turned OFF after you load
the game (make sure it is turned ON while the game loads the first two
disk sides, then turn it OFF when game play begins...otherwise gameplay
is unbearably slow).

As for how to optimize this game so it plays faster...well...I'm not
entirely sure yet. You might try compiling it somehow and making it run
faster that way, because it is intepreted from the game data file on
both sides of HLAADV.D64 and HLAADV2.D64.

If playing on a REAL Commodore 64 computer, have lots of patience while
the game determines what command you entered and then wait as it
displays the current room. Sometimes it took up to 45 seconds for this
to happen for command (an almost unbearable wait). But hey...a game
that shouldn't fit into a Commodore 64 now does, so I guess there's
some sacrifices to be made. :) Speed being one of them.

If you have any suggestions on improving this game, please write to me
at:

dunric@yahoo.com

The website for the original HLA Adventure game is located at:

http://members.tripod.com/~panks/hlaadv.html

Alternatively, you can grab a copy of HLA Adventure for the Commodore
64 at my main adventure games page:

http://www.geocities.com/dunric/pauladv.html

it coincidence, both VGS'03 and SWRAP EXPO'03 was at the same location.
VGS was announced before SWRAP this year.
and yes they are headed back to fairfield inn.

IceT or FlickerTerm80 with a nice C=64 monitor switched into 'split' mode
looks mighty nice :)

Yeah, he opened up the XE and showed me. He also had 128MEG of ram in it and a port to use APE on a PC, but the screen floored me. I would have bought if it was for sale.

I may have asked this before, so feel free to chastise me if I have, but...

In my "on again, off again" quest to get back more into the 8-bit scene, I'm working to learn 6502 assembly a bit better, and my end goal is to put together a game that can run on stock 130XE hardware and perhaps go as far as putting out some homebrew carts (thanks for the burning pointers a while back). I haven't decided yet whether I want to do a port from another platform or work on an original idea.

What I'd like to know is if there is a good source for assembly (can be geared for Assembler Editor or MAC/65 - either way) source code for a reasonably basic game or outline of a game. I feel like I'm getting a good grasp of the initial concepts, but I know there are a lot of tricks and recommended practices that I am less than in tune with, so it would be great to have at least one nice sample to work with that does a good job with screen handling, speed, memory usage, etc.

Could be I already have something among all the 8-bit archives I've grabbed and don't even know it, so if I might find something in the Pooldisk or any other generally accessible collections, just assume that I could tripped over it and not noticed. :)

Any pointers will be greatly appreciated!

thanks

ANALOG published source code for all their
ML games, so the magazine would be good.
If you don't have the magazines, then you could
go to the cyberroach site and maybe download
some articles and code.
There may be some good books for Assembler
at the Kevin Savitz archive site. (there are
a number of them, http://www.atariarchives.org

The 'Mapping the Atari' is essential. I find the
table of all documented operators (LDA, STA, TXA, RTI, about 50 of them,
found in Inman's
'The Atari Assembler' a very useful item.
I have some text files that can be good intros.
De Re Atari has a lot of useful info, like especially
the IOCBs, how to set them up and use them.
Someone was asking about VBIs, I found some
info at the URL I mentioned.
I started with Poole and McNiff's 'Your Atari
Computer' and really never graduated from
BASIC, but can use USR calls from BASIC.
For a beginner, BASIC, or maybe ACTION!
can enable to accomplish something easily
that would be difficult in assembler. I never
graduated to MAC 65, or today the cross
assembler for PCs that let you develop on
a PC (I forget the name). I would guess most

Mac65 programmers have a fairly large bunch
of macros to use, just set up the parameters
and call the macro, return after accomplishing
what you wanted.
Russg

Thanks Russ. I have ATR images for '85 to '88 ANALOG disks in the Pooldisk collection, so I will start looking there. I'm not surprised there is likely some good source hiding in all the stuff on my computer.

I'm pretty good bookwise - I grabbed a lot the recommended reading (including the ones you referenced) a while back and have worked my way through some of it. My biggest issue is having the time to code enough to not forget everything I learn. :)

One of the most impressive (at least to me) books explaining game design and programming on the Atari is "Atari Graphics And Arcade Game Design" . Starts off with Basic USR calls and moves thru all aspects of the Atari feature set as it moves more and more toward straight Assembly code for gaming.

The Assembly code is for the F-S Macro Assembler (compatible w/

SynAssembler). But, if you are up on the basics for either Editor
Assembler or MAC/65, you can easily make the minor code/syntax changes.

The book is available (as RussG mentions) on Kevin's site:

http://www.atariarchives.org/agagd/

Hi all,

The 130xe had the following mods built in:

PS/1 4" LCD screen with built in speakers
Internal MyIDE by Mr Atari
Compact Flash Adapter and 128mb CF card
32 in 1 OS by AtariMax

The LCD folds forward for storage and transport. The machine can boot
from the CF with the 32n1. Its pretty cool to see the machine boot
without a disk drive :)

I'm thinking of making a battery pack, but I'm thinking that the
battery life will pretty short. But it would be worth to see it work
with a battery pack.

I would like to make more of these, but LCD PS/1 screens a little
pricey to make a lot of them... Cost about $200 for the parts alone
not including the battery pack or the 130xe. I really just want to see
if it could be done.

Rory

I have the source code for my demos on : http://games.nmi.no/atari/a8dl.htm
if that helps! They only run on PAL Ataris and neither emulator or NTSC will
do. But the source is there anyways. And I also wrote a very simple
introduction on Megamagazine (don't remember the number they were on),
called Making of a demo or something.

Good luck and please feel free to ask, I will do my best to help!

Take Atarian care

Hello folks,
this is just a small reminder that the ABBUC software and hardware
contests will end by the 31 August 2005. If you still have any
contributions, get in contact with the software-ressort of abbuc
(softwareatabbuc.de) or the hardware-ressort of abbuc
(hardwareatabbuc.de) respectively...

For those, who have never heard of these contests, the rules and the

available prizes can be found with this link:

http://www.atari-portal.net/modules.php?name=DocTree&dtIsBlk=y&dtId=184

just click on the interested subject and then choose your language
(english, german, polish, czech and spanish are available). Well, hope
to hear from you soon...   greetings from ABBUC, Andreas Magenheimer.

   On Sun, 10 Jul 2005 at 16:20 -0700, stephen sheppard scribbled:
->According to the 8-bit FAQ ... there was also L.E. Systems LEDS5-
->01 which with ... the "RAM Charger" upgrade could run CP/M.
->I was surprised to hear that the Indus GT could also be upgraded
->to run CP/M.

   On February 10, 1987, Future Systems Inc. sent a letter to 40,000
people who had bought Indus disk drives for Atari or Commodore com-
puters, announcing that they had acquired manufacturing and market-
ing rights for the Indus. Ram Charger was the name for their 64K
CP/M module for the Indus drive, also announced in that letter.

   Apparently the L.E. drive also used the Future Systems CP/M
board. As I mentioned in another posting, I have an Indus drive
with the CP/M board installed so I can attest that it works.

The following announcement is excerpted from the Vintage Computer Festival (VCF) Gazette, Volume 3 Issue 1, published May 12, 2005:

VCF Midwest "Lite"

The VCF is introducing the new concept of the VCF "Lite" event. VCF Lite events feature all of the elements of a traditional VCF event (including speakers, exhibitors and vendors) but the event is held on a single day instead of across two days.

VCF Midwest 1.0 will be held on Saturday, July 30th at Purdue University in West Lafayette, Indiana. Doors will open at 9:30am, with speakers beginning at 10:00am and exhibits starting at 12:00pm. The event ends at 5:00pm. Admission is $5 per person.

Exhibitors and vendors are wanted, so if you want to show off part of your collection or want to sell some of it, register now at the VCF Midwest website at:

http://www.vintage.org/2005/midwest/

Additional VCF Midwest 1.0 information will be posted to the VCF Midwest website in the coming weeks, so get yourself onto the VCF mailing list to be informed of updates as they are announced. You can add yourself to the VCF mailing list here:

http://www.vintage.org/maillist.php

A separate announcement for VCF Midwest 1.0 with more information about the event will be distributed in the coming days so be on the look-out for that.

If you'd like to organize a VCF Lite in your area, please contact Sellam Ismail at <sellam@vintage.org>.

Best regards,

Sellam Ismail
Producer
Vintage Computer Festival
http://www.vintage.org/

Subject: It's close to that time again; ACEC Swap Meet

Here's the easy way to get the information folks:

http://www.angelfire.com/oh4/acec/acec.html

In short, the Swap is Sept. 10 this year. See you there!

R. Wayne Arenz

Neat. I have an Indus drive - any plans on getting rid of the second
board?

FlightSimBooks.com is a new site that features the full text of eleven
classic flight simulation books.

    http://www.FlightSimBooks.com

More than 2,200 printed pages have been digitized into 800+ web pages.
The titles available are:

   - Jet Fighter School and Jet Fighter School II by Richard G. Sheffield

   - Flying on Instruments with Flight Simulator by Jonathan M. Stern

   - Learning to Fly with Flight Simulator and Realistic Commercial
Flying with Flight Simulator by John Rafferty

   - 40 Great Flight Simulator Adventures, 40 More Great Flight
Simulator Adventures, Flight Simulator Co-Pilot, Flying Flight
Simulator, Runway USA, and A Flight Simulator Odyssey by Charles Gulick

These books, published from 1985-1989, cover Microsoft Flight Simulator
and Sublogic Flight Simulator software, plus other flight sim programs
including F-15 Strike Eagle and Sublogic's Jet. Users who prefer more
modern flight simulators will find that many of the techniques and
situations described in these books, such as aerobatic maneuvers and
instrument flying techniques, remain relevant to newer flight simulators.

All of the books are available with the gracious permission of their

authors.

FlightSimBooks.com was created by Kevin Savetz with help from
volunteers. His other classic computing sites include AtariArchives.org,
which offers the full text of 30 classic computing books; and Classic
Computer Magazine Archive (www.atarimagazines.com), which offers full
text of Compute!, Creative Computing, Antic, and other early computer
magazines.

Enjoy!
Kevin

   On Thu, 21 Jul 2005 at 14:04 -0500, Slor scribbled:
->Neat. I have an Indus drive - any plans on getting rid of the
->second board?

   Please contact me in e-mail (see below). Incidentally, I didn't
mention that the extra board made the Indus run hot. In order to use
the drive with the CP/M board installed for any length of time it re-
quired extra efforts to cool it down. For that reason I'd recommend
to anybody thinking about installing that board that they do it in a
drive that's extra, not in their main drive if they have only one.

  Then there's the question of how many people are running actual
Atari 8-bit floppy disk drives nowadays? I am, but I'll have to
admit I haven't turned my Atari system on for several months.

Don't hesitate to ask. I am looking for graphics artists myself, but seem
unable to find any. I am about to complete my Atari Box World game and start
to code Atari Mummy Maze. Need someone to draw me some cool graphics.

What's your plan? Demo? Game? Utils?

Have a nice Atarian weekend!

Find out more about the battle between Atari and Commodore in a new
book, "The Spectacular Rise and Fall of Commodore". Learn how former
Atari 2600/Atari 800 engineer Jay Miner developed the Amiga computer,
and how Atari almost purchased Amiga. Find out how the Atari ST was
partially designed by Commodore engineers while they were still at
Commodore. Atari founder Nolan Bushnell even joined with Commodore to
launch the Commodore CDTV, a precursor to the modern DVD player.

The Spectacular Rise and Fall of Commodore is a detailed history of the company behind the best selling computer system of all time, the Commodore 64. This book was almost two years in the making, using over 44 hours of interviews with Commodore engineers and managers.

Title: The Spectacular Rise and Fall of Commodore: The Inside Story
Pages: 624
Size: 6 x 9 inches
ISBN 0-9738649-0-7
August 2005

I took a look at your demo articles - good intro to some basics. I'll
check out what's on your site next. Thanks for the pointers.

>
> What's your plan? Demo? Game? Utils?

Most likely a game. Something simple to begin, then perhaps a port from
another platform.

Hello. I'm looking for a working copy of Spartaread, so you can read

spartados disks on an ibm drive. I found a couple copies but cannot
unarc them. If anyone can just send an attachment with the files
unarc'd, i'd appreciate it!

Thanx!

thanks! I appreciate it! Unfortunately, i found out that i need a
360k floppy to read the spartados disks, and i have 1.2mb drives. I'm
now just going to find an xformer 2000 cable, or sio2pc cable. It
would be better to get an xformer 2000, as i could play atari games on
the pc.

Hello out there. I used to play Pac-Man in the arcade, like just about
everyone this side of the planet Jupiter. I remember some of the
patterns, and was wondering if there are any patterns anyone in this NG
has developed for the 8-bit Pac-Man cartridge?

Please lemme know.

thanx!

Anyone have the actual book and looking to get rid of it?

thanks

Rick,

Outside of the arcade games, patterns just don't work. The arcade games had
used an algorithm that controlled the ghosts behavior based on the position
of Pacman in the maze. This obviously lead people to develop patterns of
play that when used again and again enabled people to suceed in the game.

As the game was ported to other video game systems and computers, the programmers who wrote these translations developed their versions based on observations of the game and not actual game code. So you will find that even though the may look like Pacman, their underlying game code isn't Pacman but someone else's interpretation of Pacman.   And because of this they don't play the same way.

Namco later on put randomness into Ms. Pacman to prevent the ability to develop patterns. Patterns encroached onto the ability of arcades from making more money on the games because people who were able to play longer tied up a machine from collecting more quarters.

Glenn

I currently have the book Atari Graphics and Arcade Game Design up for auction on Ebay.

Bidding started at $5.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=6970167341

There are a couple days left in the bidding.

Jared

I know there was some patterns not too long after it came out. They were in
some magazines along with the arcade patterns.

I would not mind doing so,

but have a problem. my 8-bit monitor went down on me.

I have ordered another and when it arrives I will be back in business
and
will make ya a ATR or something asap.
phantomm@bellsouth.net

I also have a collection of MIO utilities and a collection of
SpartaDos Utilities, Disks full of them, that I may put into some type
of
package for a small copying fee if anyone is interested.

The Indus disk drives used a Z80 processor; supposedly they could be
upgraded to 64K RAM and could run CP/M.

If you aren't too particular OSS came out with something like OS/A. It's
been a long time since I used it. I remember it as similar to Apple and
CP/M with a command line interface. Not too unlike what Sparta DOS was
years later.

> we'll be able to outsource the OCR/HTML work to get material online
> quickly. If not, you get your contribution back in full.

To donate money, people first have to earn it by selling their labour and paying tax (about 20% in my case). The outsourced people may also have to pay tax.

Why not ask people to contribute their labour directly, by doing some OCR themselves?

They do not have to do the whole book or even a chapter, just a few pages each when they have the odd moment free.

Even rough OCR would do, since the proof reading can be done by netizens reporting errors.

HTML is best done by a single person, to ensure consistent style over pages.

Many hands make light work.

I empathise with people who convert whole documents - I did the Atari chipset data sheets and hardware guide! I'd like to see "Programming the 6502" by Zaks, but I've already done bits of "Programming the Z80" by Leventhal and I think I bit off more than I can chew!
http://homepage.ntlworld.com/kryten_droid/z80_assembly/z80_assembly.htm
However, even partial conversions are useful, as HTML frames around images -

e.g.
http://homepage.ntlworld.com/kryten_droid/Atari/ST/spg/st_prog_guide.htm
Anybody want to help with these, they would be very welcome!

BTW, $240 for 500 pages is a lot less than I thought.

Who is doing the work for that kind of money?

Will you outsource it to India/China/etc?

> themselves?

I have, and they do. For nine years, a small core of volunteers have made AtariMagazines.com and AtariArchives.org the resources they are today. They've scanned, OCRed, and HTMLized thousands of articles and dozens of books. They've been amazing. Many other people want to help but don't have the time. This is another way they can do so.

> They do not have to do the whole book or even a chapter, just a few pages
> each when they have the odd moment free.

Possibly. But doing projects in that way often takes months or years to get them online. Outsoursing gets them up in weeks.

> Even rough OCR would do, since the proof reading can be done by netizens
> reporting errors.

That's not good enough. I don't like to put material online until it's right, for a number of reasons.

> Many hands make light work.

It can, but in my experience many hands can lead to the work not getting done at all. I can't count the number of times someone has volunteered to work on a book or magazine, then after a year or two admits that they just don't have the time to finish it. This project -- Computer

Animation Primer -- is a 500-page book, quite an undertaking. I'm afraid
it wouldn't get done without paying for the work.

One other thing: AtariArchives and AtariMagazines has permission for a
whole lot of material that we just haven't had the manpower to get
online. We don't have enough vonunteers to catch up and get all this
great material online in a timely fashion.

> BTW, $240 for 500 pages is a lot less than I thought.

> Will you outsource it to India/China/etc?

I use a firm in India.

Through Aug. 22. If we get 30 contributors at $8 each by then, we'll get
the book online and do another fundraiser. If we don't, contributors get
their money back.

No really what I need is a Magnavox Professional RGB Monitor, Phillips
made a similar one.

These are RGB monitors about 13 to 14 inches. They have a long door on
the bottom of the
monitor. Inside the door is a Green Button, A CVBS/RGB button, Color,
Sharpness, Contrast
and etc.

On the back of the monitor are some ports, usually a TTL RGB, a Lin RGB,
a Audio RCA input, a
Video Input and a square VCR Button.

These can be used with an Atari ST-Falcon and also a Atari 8-bit. ALso a
Commodore 64.

The power button is on the bottom front and is usually square with a
green Led. Sometimes it
will have 80 on it or something similar.

There should be txt files floating around the internet which describe
several 130XE ram upgrades. I did one years ago that took my xe to 320k. I
believe there was also a 576k and maybe a 1 meg mod for XE's.

Btw... to get on that chat server... :) At the prompt type "bbs" (lower case)
and then "bbs" again. .
when you reach the next prompt, enter your login name and password. .
After you get past that (you will need to briefly register if you do not have a
password), enter ...
T = talk
C = Chat

I have seem to mis-placed my list of the better Atari 8bit FTP sites.

Can someone, E-mail me a list of the best ones that remain?

I'd like to upload a few programs to some of them.

Thanks in advance,
Phantomm

Thanks for the kind words, Greg!

DarkForce will be back, either when I repair what I bungled or if not
that, as soon as I can afford a replacement.

See ya! :-)

I remembered that one of the Micro Mainframe drives could run CP/M.
Whether that required an optional upgrade I don't know.

According to the 8-bit FAQ (http://www.faqs.org/faqs/atari-8-bit/faq/)
there was also L.E. Systems LEDS5-01 which with the called the "RAM
Charger" upgrade could run CP/M.

I was surprised to hear that the Indus GT could also be upgraded to run
CP/M. Always liked that drive.

The chat server at utoc.dyndns.org is temporarily down for network
reorganization.   It should be back up Monday and will probably be at a new
IP address.

Well not to take anything away from the chat server, it's great!

However, I have a 16line telnet BBS you can all check out at:

hodgepodge.dtdns.net

It features multi-user chat, and a ton of online games including rpg,
trivia, and whatnot.

Call with ansi if you can.

Thomas

The Atari Chat Server will be back online at 7:00pm Eastern time (6:00
central time).

The new IP address is: 24.57.165.180   port 23

The URL remains the same: utoc.dyndns.org

The Chat Server software will be updated this weekend to include color and
ANSI support.   In addition, the new server will allow users to create
private chat areas that are accessable by invitation only.   Many new
features coming soon.

The Atari Chat Server now has a support website available at:
http://utoc.dyndns.org

You will find news about the Atari Chat Server at this site.   You will be
able to use this website to learn about when the Atari Chat Server will be
down and what changes are in the pipeline.

I tried it, but get an error in Windoze, does one need to use a
special password to get in.

BTW, Any 8-bit sites that uses passwords would be helpful.

E-mail them to me and I won;t pass em along.

Hmmm...? I just tried it and nothing. I guess it is either gone or the site is
undergoing some changes. It did work before. I will see if I have some other
sites....

Atari (NASDAQ:ATAR) announced yesterday that it has signed a licensing agreement with Activision (NASDAQ:ATVI) to include two of their classic video game hits, Pitfall!(R) and River Raid(R) in Atari's forthcoming Atari(R) Flashback 2. The Atari Flashback 2 game line-up includes more than 40 games spanning a variety of 8-bit genres. Developed by Atari, the Atari Flashback 2 is scheduled to ship in August for under $30 at retailers nationwide. ATVI also recently released a video game based on Marvel Enterprises comic book characters the Fantastic Four.

Come Play the Atari Flashback 2.0 at our Booth at VGS- Sunday 26 June,
2005 Viewed:61

Atari Video Club/Jaguar Community United is proud to announce that
with help from Corey Koltz of 8-bit Classics
(http://www.8bitclassics.com) and Curt Vendel of the Atari Museum
http://www.atarimuseum.com/) that The Atari Flashback 2.0 game console
will take it's first midwestern appearance at The 2005 Video Game
Summit in July before it's inital release in August. This will be it's
first public showing in full retail form. The Atari Flashback 2.0 made
it's first southwestern appearence at the Okalohma Video Game Expo on
June 18t(before that it was shown at the Electrontic Entertainment
Expo back in May). The Atari Flashback 2.0 features 40 built in 2600
games all using actual 2600 technology (some games are classics but
there are a few new homebrew games included). Plus the controllers are
interchangable with classic Atari controllers. Stop by the 8-bit
classics table at VGS'05 to check out The Atari Flashback 2.0 and
flashback to the 70's when you got your first 2600.

The 2005 Video Game Summit will be on July 16th,2005 from 9am to 6pm
Fairfield inn and Suites (Heron point building), 645 West North Ave,
Lombard, IL 60148.

Join the Video Game Summit mailing list for updates on the event
(VideoGameSummit-Subscribe@yahoogroups.com) Visit the VGS website:
http://avc.atari-users.net/Events/FestVGS.html

For more information about Video Game Summit contact Daniel Iacovelli

The Atari Chat Server has been updated.

We're running new software and the power and flexibility now available are
phenomenal. The new Atari Chat Server allows private inter-node chat among
users, group chat between groups of users, private chatrooms, the ability to
send simple private messages between users, and many more features soon to
be implemented.

In the very near future, the Atari newsgroups will be available on the Atari
Chat Server as well. I am currently looking into the possibility of
providing email accounts to users as well.

Come check out the new system!

The Atari Chat Server Support Site Is Available Here:
http://utoc.dyndns.org

The Atari Chat Server is available via Telnet at: 24.57.165.180 port 23

URL: utoc.dyndns.org

There's a sad story about the XEP-80 and the way Atari treated the engineers
who designed it and their backlash on the company - I think it's the reason
why only the joystick version was released. From what I vaguely recall,
there was a parallel port version designed also.

For most programs to make use of the XEP-80, it requires the replacement of
the E: driver routine. Since most programs like Visicalc and SynCalc are
self-booting software I think they need to be rewritten to get them to use a
replacment driver and make use of a larger screen.

I don't know if the Austin-80 for the 800 was able to make Visicalc and
other programs work for it.

Someone please correct me if I got something incorrect or can add further
details.

Glenn

Does anyone out there have an Atari 8-bit computer to PC compatible
cable called the Xformer that they wanna sell? OR does anyone have a
schematic diagram on how to make one?

Either will do, but i would rather have one that's already built.

please let me know!

Thanx!

http://www.emulators.com/xformer.htm#CABLE should have enough information
for building it.. Shipping mine might take several weeks to depending on
how fast I could find it.., and get a mailer, and have time to drop it off

at post office..

The support website for the Atari Chat Server has undergone a major facelift. The Atari logo is now featured prominently at the top of the page. The style and layout has pretty much been finalized and content is being added as I type this.

Another great Atari resource has taken its place on the World Wide Web.

Check it out today.   http://utoc.dyndns.org

I get the same errors. I guess he's still new to building web pages.

His code while rock solid was a little hard for me to decifer back in
his ANALOG days. I remember thinking I would burn TEDIT into a cart but
wanted to eliminate the 2 space left margin. I looked at that source
code for a week w/o being able to figure it out.

Hi everyone!

I'm looking for two broken Atari 1050s. I just want the enclosure
shells not the mechanisms, and the shells should be in decent shape.

I do not need power supplies or anything, they are for a project of
mine.

Intriguing.

I have toyed with the idea of using a 1050 shell to mount a removable hard disk drive bay and caddy for my 160MB HDD. It originally came with an extruded aluminium case that looked nice but had no fan, thus it overheated unless just used for occasional backups.

A 1050 case has got room for a full 5.25" drive-bay and cooling fans!

I was at the VGS this past weekend and saw a neat Atari 8-bit setup at the show. It was a 130XE with one of those mini screens and speakers attached. It

was done by a member of SCAT (Atari club in Chicago). Great piece of hardware.

Is there a document which describes the overall strategy and operation of
your emulator? The OS kernal for a complex emulator would be an
interesting learning tool.

Of the emulated Os or the emulator design? For the latter, there's
a file named ARCHITECTURE in the distribution; it's pretty old, but
it should give some basic ideas about its design.

So long,
     Thomas

HDFMTPH9 has an option for 'embedded scsi drives'. This one works. I used the regular hdfmtph because after it was done it did a 'verifying sectors'. That really didn't seem to do much good though. Maybe i'll try the HDFMTPH9 next and see if the drives work better.

I have about 5 of them, hdfmtph, hdfmtph4,6,8 and 9. hdfmtph6.com
was the one that worked for me with a adaptec 4000a and ST 225 HD.
HDFMTPH6 and probably the others, isn't very user friendly, if it
is encountering errors, it will run forever, without any notice at all.
I learned that something was wrong if the lights were blinking for over
5 or 10 minutes. It could be that different hdfmtph's are for different
type drives, I found no docs on them.

Opps, I lied, I do have a hdfmtph doc.......:
"
HDFMTPH6 is the general purpose
 physical formatter for most drives
 and controllers. It provides a
 fast format with verify passes and
 remapping for bad sectors.

HDFMTPH6 does not support the
 Seagate ST225N imbedded SCSI
 drive. Try the older HDFMTPH for
 those drives. After formatting,
 you should set the correct start
 and end+1 sectors for your
 drive(s) and then run the HDFMTDIR
 directory build program on each
 drive partition. Remember to save
 the configuration when all finished.

HDFMTPH9 is the main formatter modified
 to work with NEWER Seagate embedded
 SCSI drives. Only those drives with
 the newer firmware will work properly
 (this appears to be 1.2 or greater).
 Earlier versions of Seagate embedded
 drive will only format 512 byte
 sectors. If your drive formats but
 shows only half the sectors it should
 have, and you get an error when trying
 to write to it, then chances are it
 has the older firmware. Be careful!

PARK_AD is the park command for
 Adaptec controllers. Syntax is:

   PARK_AD [Dn:]

This moves the head on the physical
 drive to the innermost cylinders.
 It is a good idea to park the head
 before transporting the drive and
 especially before shipping it.
 There presently is no park command
 for other controllers.

All new MIO files will be posted on
 our BBS for downloading as they
 are created or updated.

ICD BBS 815-968-2229

Oh well, here's something I wrote, because I can't remember stuff like this:

0,70
      Some Notes on using Hard Drive(s) with MIO
                            Russ Gilbert

These notes cannot/do not replace the MIO owner's manual. It is
intended to give some helpful hints that the owner manual may leave a

bit unclear.

The MIO can only use hard drives with 256 byte sectors. These would be only the older MFM, RLL and SCSI hard drives, probably less than 100 megs in size.

For MFM and RLL hard drives, a SCSI to MFM or SCSI to RLL adapter/controller must be used. The most common is the Adaptec 4000A, aka ACB-4000A controller, used with a Seagate ST225 20 meg hard drive. Any 256 byte/sector mfm hard drive can be used with the MIO and 4000A, however. The RLL Adaptec controller is the ACB-4070. I don't think using RLL drives with the 4000A or a MFM with a 4070 is a good idea. 256 byte/sector SCSI hard drives exist, such as the Seagate ST225N. SCSI hard drives have the controller built into them, so no 'in between' controller is needed.

SCSI uses a convention of ID number and Logical Unit Number (LUN). It seems the ID number is always 0 for a setup with a single controller. ie. the ID number identifies the controller number. I suppose you can somehow daisy chain controllers. You'd have to daisy chain controllers if you used two SCSI drives, which would have two separate controllers (remember the SCSI has built in controllers).

The LUN is the physical drive number. You must set a jumper on the drive itself to indicate which drive it is. 0, 1, 2, 3 etc.

So, drive 1 on the controller is ID 0, LUN 0. Drive 2, attached to the same controller would be ID 0, LUN 1.

The MIO also can use SASI drives. I have no idea what these are.

Ok, now to my notes on specifics of setting up.

I. THE CABLES. POWER SUPPLY AND JUMPER SETTINGS:

Keep your cables short. No more than about one foot in length is probably best. Any pc power supply can be used that has the 'standard' four hole 'D' shaped power plugs. Newer power supplies may not have the correct plug, or an adapter may be needed. The power requirements of the controller and HDs should be carefully determined, and matching power given to them.

There must always be a drive 0. If more than one drive is to be used, the termination resistor, somewhere on the hard drive itself, must be removed. Only the last drive MUST have this termination resistor and no other drives can have it, as I understand. There are no termination resistors on the cables themselves (the MIO documentation seems to indicate there should be.) Sometimes the termination resistor isn't where you can get at it, it is inside the drive someplace. Possibly a drive like this would have to be the last drive.

Set the jumper which selects the drive number. The first one for drive one. These jumpers can often be identified by searching for drive

information from the drive manufacturer on the www (eg. www.seagate.com).

A fifty pin ribbon cable connects to the MIO. The red 'line' on the cable is wire #1 and goes to pin 1. Pin one is at the top back of the MIO. It is possible to put this ribbon on backwards. With the pin type headers, great care and patience should be taken to line up the holes and pins and gently push the cable connector on the pins. Removing the connector should be done slowly, probably prying with a small screw driver, first one side then the other. It is VERY easy to bend and break the head pins, great care must be taken installing and removing the cables.

For MFM and RLL drives, there is a 34 pin and a 20 pin ribbon cable to the drives, coming from the adapter. The 34 pin can be daisy chained. Each drive gets a separate 20 pin ribbon. The J0 on the 4000A is for drive 1 and J1 is for drive 2. Be sure the 20 pin connections and the jumper settings on the HD match. And be certain of the pin 1s on your connections. More than one connection can be done backwards. The slot connectors with a notch are nice because you can't put them on backwards.

II. WITH CONNECTIONS MADE, YOU ARE READY TO POWER UP:

The sequence is first hds, then MIO and finally computer.
The hard drive lights should blink a few times and the controller light should blink a few times, then all hd and controller lights should go out (if they don't, something is wrong with your setup or hardware). With lights out on the hd and controller, turn on the MIO.

Finally turn on the computer. Hold SELECT and hit RESET to enter the MIO menu. Select 'T' for drive type, and hit 'N' to select the number of the drive you want the hd partition to be. The MIO menu determines a hd partition. A partition cannot be larger than 16 megs. You can partition a single hd to be more than one 'Drive #' in order to use more of the hard drive over 16 megs.

I'm only going to describe a single hard drive setup. If you understand this, you can add another one.

Say the hard drive is a 20 meg. You want a 16 meg partition and a 4 meg partition. You select, say, drive # 3 to be a Hard drive. I forget when you hit SPACE and when you hit ENTER, but you go thru the interface, ID, LUN, Cylinders (Drive size is automatically computed), Heads, Start Sector and End+1 sector. For a 16 meg partition, the start sector should be 1 and the End+1 sector 65536. The number of cylinders and heads you have to know from the hard drive manufacturer. Often, this is printed on the hd. For a second partition on the same physical hd, you would start with sector 65536 and end with the about 81180 (for 20 meg drive).

Ok, you can't save the configuration yet, the hd hasn't been low level formatted. For this use the hdfmtph6.com on the MIO disk you got. I

had best, actually only, success with hdfmtph6. Other hds may do better with one of the other hdfmtphX, but hdfmtph6 worked best for me. You will be asked the ID, LUN you want to format. 0, 0 for the first partition. Then you'll be asked what type of controller you have. Finally you'll be asked 'buffered' or 'unbuffered'. You might get a hint from hard drive tech specs on this, but 'Buffered' worked best for me for a ST225 and Olivetti XM 5220/2.

The behavior of hdfmtph6 isn't very friendly, it doesn't let you know if it is hung or what is going on. Normally you begin the low level format and the hd light comes on for some time. Then the screen shows verifying blocks and the # of blocks to verify. If an error occurs, the whole process starts over. If lots and lots of errors occur, there is probably something wrong with your setup. Also, if the initial stage, before the verify, takes longer than, say, five minutes, something is wrong. I waited an hour once, I think. Everything could burn up, or something, the program just keeps going, saying nothing.

A successful completion of hdfmtph6 will tell you success and tell you also the number of sectors on the hd. Write this down, as it is the last sector you can use for partitioning in the MIO menu.

Finally, you go into the MIO menu, save the configuration and then run hdfmtdir.com to put the Atari Directory structure on the hd.
All above is with SpartaDOS. MyDOS may have some differences, and, actually I suggest using MyDOS with the Black Box and SpartaDOS with the MIO.

Copy DOS (say x32d.dos) to the hd, type 'boot x32d.dos' and now you can boot from the hd. The MIO configuration will load from the hd when you do a power up sequence. Other than the first time, you can leave the MIO on all the time. Just be sure the hd is up to speed and finished initializing before turning on the computer.

Russ Gilbert

FamilyNet Newsgate

Hey Ben, XEP-80 is not needed, and most of the time I have been using a 48K
Atari 400, a 850 and my UDS-10. .
Works great.

Downloading some files from atari.online.pl and wondered what format XEX is?
Any converters that support it?

Thanks and take Atarian care

I believe those are cartridge binaries converted to file.

Hi,

XEX files are recognized by several emulators and associated thru the
Windows PC file system and will 'Load and Run'. Opening the XEX file will
start the emulator with the selected XEX file if associated to the
emulator.. XEX files can be any Binary file recognized by the Atari 8-bit,
utility,game,application. XEX files can be renamed to COM,OBJ, etc.. and
used by Atari 8bit equipment from disk, or other.

RoyE

They probably don't work because the MyIDE drive doesn't have any
standard partition table. The info on how the configuration data and
everything else is layed out on the drive should be at mr-atari.com

Since you are using lynx, I assume you are using a Unix shell account via dialup. If the operator of the Unix system has not removed or restricted access, you can download files using the following:

1) Use lynx or w3m to download the desired files to your Unix working folder. If you know the exact URL of the file you want to retrieve, you can use wget instead.

2) Once the file(s) are in your working folder on your Unix account, you can download them to your Atari by using "sx" to send the file to your Atari via XMODEM. (This is a variation of the "sz" send zmodem command).

Consult the man pages "man w3m", "man sz", etc for the exact syntax on these commands.

Good luck.

It's not in any "format" in that sense of the word (like FAT32, NTFS,
etc....) Mr. Atari's OS is just writing "RAW" data to the drive, and only
256 bytes of the 512 bytes available per sector. I think that ghost should
be able to back it up using a raw sector image of the drive (but never
tried that, although I've used ghost for years.)

Hmmm... I should try it just for fun.

If FDISK.BAS won't work, then I'd say your drive is either incompatible
with the MyIDE hardware, or has some bad sectors in vital areas (vital to
MyIDE that is.)

Try another drive and see what happens.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

Well, the FDISK.BAS does what it should, but it seems to loose the
information later. I have managed to set up partitions and boot MyDOS from
them, but I can't create the image space. Then it all turns bad.

Thanks, so they're just standard binary files with run addresses and all.
That's good to know! Thanks again and take Atarian care

I was just wanting to take an informal survey and find out if most
8bitters access the Internet at 80 or 40 columns. I just assumed that most
of you who are expert enough to do so would have upgraded to an 80 column
setup as well. But you know what they say about assuming... :-)

The reason I'm asking is, currently, I don't really have 40 column support
on my BBS. Its available as an option where you edit your parameters, but
most menus are at 80 columns.

I'm trying to determine whether or not there is a need for the 40 column
support. I mean, if 8 out 10 8bit users on the 'Net are at 80 columns, I'm
probably not going to fool with it. Of course, if 8 out of 10 are at 40
then its something I'll have to look at.

Thanks for the input gang! :-)

Atari binary files are quite often stored on our hard disks among other binary
files (MS Windows, UNIX, etc.). Atari binary files like .OBJ, .COM. .EXE should
be renamed to .XEX in order to avoid confusion with common binary files used
with MS Windows and others OSes.

That's weird. Setting up image space doesn't really do much, besides
setting one byte in sector 1, head 0, cylinder 0.

Would anybody here be interested in an NNTP server that just had the Atari
newsgroups on it?

I was thinking about setting up my own NNTP server to host the newsgroups
that I read most frequently.   The reson for this is two fold.   Firstly,
posts on my ISP's NNTP server don't have a very long lifespan.   They seem
to get deleted quite regularly.   Secondly, I'm wanting to create an archive
of newsgroup discussions but still preserve the newsgroup structure.

Good idea or bad idea?   Would I just be wasting valuable drive space?
Would anybody here be interested in such a server?

Think I found the problem. Both my stock 130XE PAL machines act up, while my
800XL does it fine. Now my only problem is remembering what images are on
which slot. Sigh, getting old ;-)

I don't know...mine seems to work out fine for me. And there's google for
archiving messeges.

I actuall use both but tend to like my Atari when connecting to atari
boards. So 40 columns would get my vote.

WOW, Real Multitasking!!! I thought the CoCo and one rarely heard of
alternative OS for the Apple //gs were the only ones with that!

Will snapshot work with an Atari DOS menu, G.O.E. or something similar,
or does it have it's own menu?

How much RAM and how many tasks will it work with?

How do you upgrade the RAM on a 130XE anyway?

    Only a few Atari programs really support 80 columns. If you want
  people to actually call with thier 8-bit Atari, 40 columns is a must. :)
  ATASCII support, even better. :)

Well, DarkForce is down right now anyways, but it looks like the trend is
going to be for supporting 40 columns.

Guess I've got some redesigning work to do once we get back online. :-)

PS BTW, whats ATASCI? I mean, I know what basic ASCII is, is that just the
Atari 8bit version of it? Thanks.

--
_/_/_/

will be down until further notice, for repairs/upgrades.

I'll post a message just as soon as we are back online.

Thanks and sorry for any inconvenience...

--
_/_/_/

Dark Force? 'May the force be with you.' There's dark energy and dark
matter,
now dark force, instead of E=MC^2, or F=MA, we have DF=DM*DA.

ATASCII is the Atari 8-bit char set, same as ASCII for alphabet and numbers
and the usual characters 32 to 126, but also has useful graphics characters
for
ATASCII graphics, rather than the ASCII 128 to 255 and 0 to 31.

The full text of Compute II magazine is now available at The Classic
Computer Magazine Archive. (www.atarimagazines.com)

Compute II, subtitled "The Single-Board Compute", was a sort-lived
spin-off from Compute! magazine that only published two issues in 1980.
It focused on KIM, AIM, SYM, and OSI single-board computers. Articles in
the archive include "Designing an IEEE-488 Receiver with the SYM" and
reviews of expansion kits for early single-board computers, including a
Speak & Spell interface for the SYM. A complete list of the Compute II
articles is available at http://www.atarimagazines.com/computeii/index/ .

Launched in 1996, the Classic Computer Magazine Archive serves up 6,000
articles from early personal computer magazines including Compute,
Creative Computing, Antic, STart, Hi-Res, and Tandy Whiz Kids comic
books.

Okay, thanks for the explanation. Now...how is it used? With ANSI or VT52
you use codes to display what you want. If someone can point me to a list
or send it to me, I can start working on stuff.

Also, any 8bit telnet BBSs using it right now so I can see examples?

Thanks again.

Hey,

Not sure if this will help ya.

But do you have the SpartaDOS ToolKit?

If so, there are two programs that might help with the bad sectors.
CLEANUP and DISKRX. I know that one of these if not both will go thru
your hard drive and allow you to mark Bad Sectors so that they don't get
used.

It does seem that alot of older harddrives will have some BadSectors.
Modern Software markes them as bad automatically IIRC. so that you don;t
run into trouble with them after you start filling the drive with
software.

Now CLEANUP and DISKRX does this. Even if you have software already on
the drive. I have used these in the past on my hard drives to mark bad
sectors.

One problem is that if you already have alot of software on the drive
and mark
the bad sectors. They can screwup a few programs or directories so you
might
want to back up your software before you do this on a fairly full hard
drive.

On a new hard drive, Marking the bad sectors to not use is what ya need
to do
to prevent problems. Unless you have tons of them. If thats the case
then something
isn't right. The drive is very bad or not formatted correctly.

This is correct to the best of my knowledge.
Please correct me if I am wrong.

I aggree with you here. 40 columns looks best on the 8-bit. I have seen 80
columns and it looks ok, but the test look somewhat fuzzy. Now if we can clear
up the fuzziness, then by all means 80 columns would be the thing to have.

I would give it a try, but what kinds of Atari newsgroups would there be?

We're trying something new that will hopefully mean we can make more
great material available much more quickly: user contributions with a
specific goal in mind.

Here's how it works: You can make a contribution with PayPal for a
specific project at AtariArchives. If the target amount is reached,
we'll be able to outsource the OCR/HTML work to get material online
quickly. If not, you get your contribution back in full.

Our first user-supported project: Of the 30+ books available at
AtariArchives.org, one of the most popular is Computer Animation Primer
by David Fox and Mitchell Waite. However, that book is currently
available only with full-page images. If successful, this fundraiser
will allow us to make the full text available. This would be much more
useful, searchable, and easier to read. Users will be able to copy and
paste excerpts for reports, etc.

Want to make it happen? Contribute $8 or more at
https://www.fundable.org/groupactions/computeranimationprimer

Thanks
Kevin

Foggy<REALLY foggy> memory but SDX wasn't compiled or written on an
Atari 8 bit. It was done on a one off compiler/assembler on an IBM.
Could be a Keith Ledbetter cross compiler, like I said foggy memory.
Unless FTE gave out copies to subcontracters there would be only one
copy available and Mike would have it.

I am 90% sure the source code for SDX was specific to the compiler which
is not in distribution. IOW: Even if you had the source to it you would
have to figure out what it does and how to do a translation.

At some point in time it becomes academic for several reasons. SDX was
more of a power user toy. If you needed a huge amount of free memory for
running a BBS or programming it was the tool to have. Not a lot of BBSs
left and the same holds true for programmers.

Please excuse my inexcuseable ignorance (again) but what is Sparta DOS
X? Yes, I know it's a third party DOS for Atari computers, but is it
more or less advanced than Atari XE DOS? The "X" isn't a version
number; does it mean "uniX" like features (pipes, filters,
subdirectories, etc) ?

I understand there is no multitasking enironment for the Atari, but
what about task switching? I read somthing about a program called
"Snapshot" that seems to task switch, or as they put it in the old
days, "create seperate virtual computers" using the extra RAM.

Did anyone make an adapter to use a 1064 on an XE?

hi Rick,
  thank you for your answer. having the source would be nice but I can
get by without that. there are some nice utilities in the cart I would
like for the SpataDOS 3.X versions. I do a lot of my Atari work for
the Cross Assembler from Kieth Ledbetter. it is a nice piece of work
on his part.
  anyway, the file format for those cart *.com files is rather odd,
would like to understand that format better.

hi,
  both the MIO and BlackBox low level format utilities will scan for
bad sector. If any ar found then they are mapped out and the drive
formats again with the bad sectors taken out. Also, the fmtdir.com
from the BlackBox utility disk will checl for bad sectors and write
them to a special file "SECTORS.BAD" IIRC.
hth

SpartaDos X is a ROM based DOS that runs on a cartridge. It has a pass through connector on top to attach an additional cartridge such as an R-Time 8 (real time). It eliminates the need to boot off of a floppy, plus has some powerful additions to it.

Yes I used this program (snapshot) with my 130xe. There was a
terminal program (I believe it was called Bobterm, but 15 years ago
is pretty hazy for me) that allowed you to play "breakout" while you
were downloading, so there was that one program for the 8bits that
multitasked.

apparently when I boot my machine the default master volume is set half way.
I usually have to turn it up using volume controls to about 90. If I don't
turn up the volume after booting, the sound in Atari++ is working. If I turn
up the volume using windows volume controls to about 90% from the previous
50%, and then run Atari++ it seems the volume is too loud and it cuts off
the output altogether. Reducing to 70% produced very distored sound. So
that's the problem I was having for whatever its worth.

All of the SCSI / SASI controllers that I used with my MIO (and there were a bunch of them - Adaptec 4000; DTC-510b, Xebec and others) supported two drives - In fact, I've never seen one of those controllers that didn't support 2.

Work alike/MS type commands. It had a default batch type file in its ROM that would set up several options like reserving 64k of banked memory for OSI language like BasicXE. On a 256k machine it really came alive since you could add a batch file to your boot disk and set up your machine as you wished. For instance you could set up a 192k RAMDISK, copy all the frequently accessed BBS files to it, load the RS232 handler, then run your BBS program. You could access 8 drives of up to 16 megs and RAMDISK w/o having to change anything.

For programming, lets say you were writing ML routines to be accessed by BASIC. You would just have your ED/ASM plugged into the SDX and compile to page 6. You would then switch to built in BASIC just using commands and test your code. Doing compiles of large programs to and from RAMDISK made doing large programs almost tolerable.

There were a lot of other utilities in SDX IIRC. I think it had a ARC type utility, support for high speed disk drives, handlers for ATR8000, etcetera. I may be thinking about one of the other Sparta for the ATR handler but heck, something like a 256k or 512k ROM in that puppy meant a lot of goddies were included.

For the average person that just wanted to play PacMan it didn't have much value. A lot of the functions like directories and 16 meg disk access were handled by MyDOS. Even when SIO2PC came along I found bugs with my version of SDX<2.19?> made it unusable: That was pretty much the last nail in the coffin for me.

Looks like HDFMTPH does a physical format and then verifies the sectors.

The HDFMTPH6 doesn't include low level formatting for the seagate embedded
drives.

The HDFMTPH9 seems to work for other seagate embedded drives other than the
st225n.

shrug I don't know... Seems like the HDFMTPH is the only one that
verifies and maps out sectors.

Yes it had a ARC utility built in. I used that feature alot when I had
mine.
It was fast to ARC or UNARC to the RamDisks in the MIO.

Yes there were alot of extras in the cart.
They were all protected IIRC, meaning you could use them from the
cart. But you couldn't copy a file such as a driver from the cart to
disk right?

>
> For the average person that just wanted to play PacMan it didn't have

I had 2 at one time and sold them after I moved on to other Atari
Computers.
Didn't sell my MIO and hard drives or software and a few others good
bits.

But now, I really could use a SDX cart. I'd like to get a original one.

But with the ROMS available. One can make their own with a memory cart.
Or so I've been told.

Has anyone did this yet if so, Does everything work correctly?
I know there's no pass thru, but what about everything else?

Hi,

followup to my own posting, sorry.

Just wanted to state that the broken link to os++ on my home page
has been fixed, see:

http://www.math.tu-berlin.de/~thor/atari++/

> > > On the page down, check for os++.tgz.

> > Yep, did that but the file is not there.

Now it should. Sorry for the inconvenience.

So long,
     Thomas

Okay, the link downloaded os++.tar but my windows machine does not recognize
tar format.

I'll have a look for a trustworthy tar extractor.

Just a suggestion, but is zip format the most common format (at least for
the general public running Windows)? I use zip format for stuff I put on the
web. I'm guessing Unix/Linux can cope with that.

And Winzip can copy with tgz (= tar.gz)

Bye Jochen

Using Mandriva Linux here, no problem with *.zip files at all.

You might have to install the zip utility (RPM for Mandriva) but other
than that, its dead easy to use. Command line or gui.

I'm really foggy on that too. I think it probably had a kernal in the
ROM that was accessed by just about every utility so they wouldn't run

w/o SDX being plugged in. I think there was one odd ball way of looking
at or transferring programs, like using redirection to pipe a print to a
disk file or something, but I can't remember what it was.

I think you need a SDX PC board because of the decoding. I don't think
they are available. Once again I can't remember exactly what the
adresses were but IIRC they worked similar to the OSS supercarts, i.e.
writes to $D5XX bank switch but were the OSS carts would respond to any
write in that range, address $D501 functioned the same as $D5F1, the SDX
was addressed at $D58X or $D5Fx and up and had enough latch to decode
the entire ROM. All the code in the carts only used the lowest addresses
available so you were safe with SDX. The information was somewhere on
the web. It was someone in the group pointed me to it. Maybe goggle
supercart and SDX.

I made a couple of pass through carts with built in RS232 and single D/A
converters. I remember it being a hassle, particularily because of my
limited number of brain cells, to get it to only respond to a limited
address range to work with Supercarts and SDX. Made for an odd stack of
my homebrew cart with SDX and Action! plugged on top of it. Leaning
Tower of Carts.

Hi,

> Just a suggestion, but is zip format the most common format (at least for
> the general public running Windows)?

Maybe, but the emulator and the Os is neither written on nor written
for - shudder - Windows. (-; It's a linux project with a win32
port.

BTW, winzip can handle .tgz just fine.

So long,
     Thomas

Namco!? WOAH! Why hadn't I heard _that_ before!?
(I guess cuz I stick around comp.sys.atari.8bit and not any arcade-related
groups ;^))

> 1986

Ah, if this is true, it was quite short-lived, which might help explain
why I hadn't heard about it. :)

<snip>
> 1999

DAMN! That would've been the one I worked on! *sniffle*

It would've had much more natural looking dust and smoke, if I had gotten
my hands on it. :^)

<snip>

So they're not dead, yet. :)

Still, though, what a ride. Thanks for contributing this, Michael!
(Hey, ever edit stuff over at Wikipedia? :))

See someone else's comment on the size of Infogrames. (I'll take their
word for it :^))

> There is no way I can see that they are going to
> build a new hardware,

Except, they already _did_. I mean, it's not a PS2, but...

  http://www.atari.com/us/games/atari_flashback/7800

and:

  http://www.classicgaming.com/features/articles/flashback2/

The latter is _actually_ an Atari-compatible device (whereas the
original Atari Flashback is based on a Nintendo-NES-on-a-chip).

> People won't Q up to play PacMan on the PSP or Xbox 360,

Define "people." There are a lot of us out here. The first disc I bought
when I got my original PlayStation was the Williams arcade classics disc
(the one with Joust and Sinistar).

Aside from Super Mario World, the only cartridges I have for my Gameboy
Advance SP are classic arcade game compliations. (Pretty much every game
I have _for_ my GBASP were made before the _original_ GB came out!)

> but they won't mind paying a few quid to download it to their phone.

And that's where people like me come in. >:^) I write cellphone games for
a small company in the Bay Area.

Except for all of the classic games they're re-releasing...

  http://www.atari.com/us/genre/arcade

* "Retro Atari" for the Gameboy DS (which is apparently pretty awesome,
  though I've never even tried a DS, let alone this game)

* Atari Anthology for PS2 & XBox

* Atari: 80 classic games in one (Windows)

* Atari Arcade (Windows)

* Atari Anniversary Edition (Windows)

* Atari Flashback (a stand-alone console with built-in games;
  not so well-received)

* Atari Flashback 2.0 (coming this summer; highly anticipated)

Linux all the way, baby! ;^)

The lowest-end models are something like:

  200MHz ARM CPU
  32MB RAM
  32MB Flash (file space)
  320x240, 16bpp backlit LCD touchscreen
  Built-in QWERTY keyboard
  CF memory & device slot
  SD/MMC memory card slot
  USB slave connector
  Linux 2.4 kernel
  Qtopia desktop environment (tho some people replace their entire s/w stack)

There're something like 1200 (at least) pieces of software for the things,
and numerous models out, these days [1], including Atari emulators! :^)

Sadly, discontinued in the US, but the Japanese market are getting
some sweet devices. (Some with 128MB of Flash, 64MB of RAM and a 4GB
HDD built-in! [2]) You _can_ get them in the US, but it'll cost you [3].

I zipped what I've got for source code for the Atari OS and put it here:
http://www.jeffersonsauctioneering.com/atari/atari-os.zip

Maybe that will help you?

Shawn Jefferson

yes. apparently the XEP wasn't very popular, so the public interest in
this topic seems to be low :(

Seems to be a "feature" of the browser you're using. Try firefox/mozilla,
they'll pickup the right mime type for me.

So long,
     Thomas

Aha, source to re-create the XL/XE ROM contents. Nice.

Having read the README, I see it is from a guy called Sidney Cadot.
Do you think it's okay for me to put the sources on the web in html format,
so long as I assign appropriate credit?

I suppose the XL is the most advanced version, so recreating the 800 source
is only of historical interest to replace the 6 MByte pdf file.

Cheers, K.

Ah, I see the author already has it on the net
http://ch.twi.tudelft.nl/~sidney/atari/
A more recent version, but in *.tar.gz form that I cannot open
Firefox downloads it correctly but my GnuWin32 utility doesn't open it.

I'll chat with Mr Cadot directly...

Mine did the same thing - just rename it to .tgz when you download.

I just got it working now, but I have an old setup, which I like very much
when programming. I use TopDos, Textpro and AMAC for coding. I made a small
partition to fit this on and that seems fine enough. However, I used to have
the MIO connected and there I swapped drives from 6 to 1 and that made
TopDos work, but the MyIDE can't swap drives. Any suggestions on easy fixes?

Take Atarian care

Excellent effort by Mr. Cadot. I just got ahold of this and built all the
roms on my Linux box - binary equivalents as advertised. :)

You're having such a hard time because your prices are too high. Lower
them until sales pick up. Match the economic times. Collectors don't
have the expendable income like they did a few years ago. Compare prices
on ebay now to what they were before the tech bust. They're like 1/3
what they used to be.

My other critical advice for him would be not to use Xmas in July as an
advertisement. It might offend some religous people (I'm a little
dissapointed but not offended) because the primary meaning of Xmas is a
religious celebration, not a means to market merchandise (remember, "Have
you made my Father's house a den of merchandise?")

I realize that many companies do market at Xmas time, however I think "Xmas
in July" sale is taking it too far.

Just some helpful criticism, not a flame.

I have no idea where one could buy it, unless you find it on ebay.
IIRC, Flashback is mostly for backing up your hard drives.
It's been awhile since I've used it though.

Now recently, I did see the program on a Atari 8-bit FTP site.
But I can't remember which one. Have a look and you might find it.

Also, I have a MIO utilitie disk from ICD. I have forgotten whats on it.
And at the moment I can't tell as my 8-bit monitor went out on me.
So until I get another monitor, I can't check out my disks.

I had forgotten that I had this disk until the other day.
It's an original ICD MIO utility disk.

I'm not sure if it came with the MIO or was sold seperate.

Anyway, my 8-bit monitor went out on me. And I can't
check my disks until I fix it or get another.

Anyone else have this disk, if so whats on it, I can't remember if it
has hard drive formatting sofware on it or what exactly.

I have another disk that has some of the HardDrive formatting
programs listed on the label.

BTW, if someone in the US has a MAGNAVOX PRO. RGB Monitor
for sell, do contact me.

There is a similar one called Phillips Magnavox 80 RGB or similar.
They are about 13 inch, and have a door that opens on the bottom
which hides the controls. There is a Green button and a CVBS button.

On the back there are a few ports. And they can also be used with
a Atari ST.

Contact me at phantomm@bellsouth.net
if you have one for sale.

No, Xmas is Gifts, Party's, Egg-nog, and decorations.

Christmas is the religious celebration.

Hello all,

I am currently designing a 6502 board with Eagle CAD software, and since no 65xx
library is in, I have begun developing one...
For now, I've put in a NMos version of 6502, plus a CMOS version (in DIP and
PLCC packages), and also DIP and PLCC packages of 65816 and 6522.
I plan to add other peripheral chips like the 6551 ACIA, etc.
Anyway, I'm a relatively new user of Eagle, so this first library might not be
perfect, but if this can be of use to someone, don't hesitate to ask...
Ah, I should have asked first: perhaps someone has already built such a library
?

Cheers,

Fabrice

the bad thing about google video is that it does NOT take you to the
home page where the video is found -
http://www.extremefunnyhumor.com/mov_atarigeeks.htm - is one location.

Ah, thanks for the URL, Jim...
Ok I'm going to download this lib, add what I have that is not already in, and
upload it back to cadsoft site...
All the best to Belle, Jim (seems she has kept you busy :-)

Cheers,

Fabrice

What's your source for the April birth date? I'm curious because then three
great enlightened beings were all bornb in April: Buddha, Christ and me.

True, I can get a great system for around $80-$100
with quite a few carts, but around here, (SE,PA),
there aren't many old Atari systems to be found.

Actually, it's well known that Xmas was hijacked from the pagans to aid
in the transistion to christianity. For all we know, Jesus' real
birthday could be in July!

Most historians place it in August, although some say it might have
been in March.

When they first came out, I believe they were limited in number made or
too expensive for the average 8-bitter.

For years I only knew one guy that had one and never saw one for sale
until
EBAY.

I have a version of the Richmonds Word Processor thats suppose to be

XEP-80 compatible. Haven't tried it out yet.

Other than that and Atari Writer, I don't know of any other as I have
only had
mine about a month.

Why do you think there's a descrepency? What method did you use
to backup your drive? I guess you're talking about 16 meg partitions
on IDE/MIO/BB drives. You could use a CRC program to check
that two copies of the same program are actually the same, this could
be done for all the files in a directory with a CRC16 checker I wrote.
I think you'll get a better response if you provide more info.
I think my CRC program pukes if it encounters a directory in the files it
is checking.

Ahh.. THAT'S what you meant by "to use past Atari ideas." You shoulda just said "innovation" :^)

Yeah, no real argument here. :^(

Check out the Warioware games for the gba. I got Warioware Twisted for
Father's day and its a very cool game. Nice simple games that a breeze
to pick up and play when you have 5-10 minutes to kill.

Yes, you can swap drives, with another program that you load. Two have
been created, one by me and another called myswap11 or something.

Here's mine:

http://www.jeffersonsauctioneering.com/atari/myide

These don't work with the new flashcart yet, well actually Sijmen's new OS
version on the flashcart. I'm working on it.

Thanks! I do however think somethings wrong with my MyIDE. If I setup a disk
(tried several) it still insist on being initialzed every time I use FDISK.
And I have setup the FDISK.BAS to use Image loader, but when I try to use
the Manager, it errors.

I got my MIO back up, so for now I am in no hurry, but hope to get the IDE
interface working too. I also have problems with the one I bought from Jerzy
Dudek. It partitions fine, but won't softformat and MYDOS either won't
format the partitions. Seems like I am out of luck. Tried with brand new
drives and old ones. Anybody have a program that would make the polish
interface work?

It's pretty darned static. Actually, it's a sticky IP address and I'm registered with dyndns.org. So the URL (utoc.dyndns.org) will always get you connected to the chat server.

There generally isn't a whole lot of traffic on this chat server because people tend to connect while there are no other people connected. I was thinking that scheduled chat sessions would remedy that situation.

One other thing, this chat server is not running on an Atari computer. It's actually running on my Mac web server. I had a bunch of extra bandwidth and clock cycles so I tossed some chat software on there. I haven't told too many people about this server (just the people here at c.s.a.8) so it should be relatively free of trolls that don't use Atari's.

I expect that this server will eventually end up running on my SGI Indy.

I would prefer to keep it Atari specific because the Atari 8-bit computers were my first true love. (I progressed from Atari -> Macintosh -> SGI)

Atari Chat Server - 24.57.169.235 - utoc.dyndns.org

There are currently ten chat channels on this server. They are:

1) Atari 8-Bit
2) Hot Topics
3) Internet
4) Computers
5) Work
6) Music
7) Games
8) Talk
9) Help!
10) Sports

To get a list of all available commands, type: /HELP

To get a list of all available channels, type: /CHANNEL

To switch to another channel, type: /CHANNEL # (Where # is the
channel number)

To logout, type: /QUIT

Most of the commands are pretty straightforward. I am letting the users of
the server change the channel subjects to whatever they desire. If you
wanted to change channel 6 (Music) to a channel on the subject of Atari
Jaguar, for example, you would simply do the following:

Goto channel 6 (Music) by typing: /channel 6

Once you are in channel 6 (Music), you can change the subject by using the

/SET command as
follows: /SET SUBJECT Atari Jaguar

The next time anybody does a channel list by typing: /CHANNEL   the list will display channel six as being a discussion on the subject of the Atari Jaguar.

There are a bunch of other commands available too.   This is a really easy chat system to use and is perfect for those people that use older machines that cannot take advantage of other chat servers.

To connect to the server with your 8-bit, just telnet to the server with something like BobTerm.

Speaking fdisk and all with the MyIde, exactly what format is a MyIde drive in?
 I mean you have the pockets of space that hold the active drive images, and
then you have this area of space that holds the images thereafter. But what
format is all this held in? .
To answer anyone curious, early on when I got my current drive from Mr. A, I
tried to back it up with Ghost and another program we used at work at the time,
Altirus... nada! Even at a low level the PC tools were not happy copying this.
 It is wild. So would love to know. .

Alright, it is just me, and my Atari 800.   I can receive files without
problem from BBS's and through actual E-mail accounts through those BBS's. So
I am fine.. for the most part. .
So you have a large number of files, but where can you go when you don't have a
browser that will allow you receive files (At least I don't think the lynx
browser in grex.org will allow for file transfers... not sure..) Anyway, I am
open to ideas... I am new to the world of FTP, but would love to know at least

how it was done during the day?

Great,

Can you list the contents of the disk until I get my monitor fixed or
replaced.

I don't want to have to hook it up to a small TV, unless I have to.

How many versions of HDFMTPH are there?

It would be good for someone to list all versions they know of,
plus what each version did.

I have a disk with some of these, but it's been sometime since
I've setup a new hard drive on my ICD 1meg MIO.

It's on my list of things to do, as I get the items I need.

And would like to use the best version of HDFMTPH to get
started with.

I will be using at least SpartaDos 3.2D for system software.

Going thru my 8-bit hard drive box. I came up on another
treasure.

2 versions of the SpartaDos Tool Kit. Manuals and Disks.

Maybe some folks didn't know that there were 2 versions.

Does anyone know if there was an official 3rd version?

In the versions I have, most of the files are the same but
the file sizes are different. And there are at least 2 new
programs on the newer? version.

I remember the ToolKit being quite useful.

DISKRX is the spartados disk editor, it edits sectors and rebuilds
directories and etc.
CLEANUP detects file structure defects in spartados and rebuilds
Directory structure.

CleanUp is one of the programs thats in the Upgraded version and isn't
in the
older version.

PROKEY is another new one not in the old version. It adds up to 20
Programmable function
keys, path prompt, screen color change, IBM style recall console keys
and more to
SpartaDos.

I remember both DiskRX and CleanUp saving info on my hard drives on more
than
one occasion. Especially if the Directory structure got screwed up as
sometimes it
did and ya didn't know it until a major problem happened or you ran
CleanUP.

So I used CleanUP often just to check.

These two are very useful on hard drives running spartados.

I know Thomas had some problems with his hard drives, These tools maybe
what he and others need if they don't already have em.

There are other useful tools in the kit.
Like a DOSMENU and MIOCFG that lets MIO owners save and reload MIO
configurations.

Just thought some maybe interested in this info.

Hi folks,

a new release of the Atari++ emulator for Linux and Win32 is
available for download at its home page:

http://www.math.tu-berlin.de/~thor/atari++/

This makes again a new stable release (it's been time, the
old stable was rather outdated).

So what's new this time:

- Fixed race condition when switching the resolution, could
  cause crashes.
- Fixed Antic CHARBASE switches, did not keep care of
  horizontal scrolling correctly.
- Fixed leaking key presses from the GUI to the core.
- Fixed PIA Port A handling, Port A input is non-buffered.
- Fixed Monitor backspace key on some broken ncurses
  implementations.
- Added "graphical" single-step trace command for the monitor.
- History of the monitor is now a tad smarter and buffers un-
  finished lines.
- Fixed "dummy writes" for INC and DEC commands.
- Fixed player horizontal split, did erraneously remove the
  old player.
- Fixed timing of the pokey timers, should be more precise
  now.
- Fixed XIO for serial baud generator, argument zero leaves
  baud rate alone.
- Fixed serial input counter for concurrent mode
- Fixed state parser, is now less sensitive to CF/LF vs. LF
  confusion.

I especially want to thank Don Fanning and Sebastian Pachuta for
their time reporting a couple of bugs in the 1.41 release. I hope
they're more or less fixed in the 1.42 by now. Thanks, folks!

So long,
     Thomas

What's on my disk is
HDFMTPH.COM
HDFMTPH6.COM
HDFMTPH9.COM
README.DOC
HDFMTDIR.COM
PARK_AD.COM

That's it. I also have another disk, which I think corrects the MIO's faulty
19200 BAUD problem. Hispeed MIO or something like that. It's on my DOWNLOAD
page at : http://games.nmi.no/atari/a8dl.htm

Take care

What I don't understand is this: I bought some hard drives off of Ebay
which appeared to work fine. Used the HDFMTPH program to set one up, used
the HDFMTDIR to setup for SpartaDOS, and still get bad sectors. Obviously
sectors aren't getting mapped out when bad. Do I need to hook this up to a
PC and use Seagates utilities? Argh...

It's been a LONG time since I formatted one (probably 10 years - it still
works fine) but I think I did my Seagate ST 225 with HDFMTPH9. I also have
a bunch of different ones. There is a file on my 'website' that has a bunch
of MIO stuff in it - unfortunately I cannot remember what is there but you
can get to it via the link below.

"Phantom" <phantomm@bellsouth.net>:

>Regarding the SDX roms, can these be used on the 1 meg Ram carts or is
>there a different type
>for that.

There's a programming image already created for SpartaDOS SDX for the
AtariMax flash cart (http://www.atarimax.com/flashcart/). The bank
selection is different and someone has modified the code.

I did the Ultima III conversion. I just want to say that it's not FULLY
tested, but if any issues come up, I'll try my best to fix them. Also, I
am going to write a utility to copy the characters from the cartridge onto
a disk and vice-versa.

I kept trying over and over in the emulator and didn't know why it kept
crashing when i said journey onward. Now I know, i have to swap the playter
disk into drive 1, because the game doesn't look for a second drive.

Im not 100% sure but I think that bug was a product of the cracked game you find on the net. The original if Im not mistaken, asked for a number of drives at the start and would use all four if selected.

Steve,

Are you aware of any knowledge about the PAL chip on the Spartados X cart?
I have two blank Spartados X boards that I would like to populate.

Must'a been a different game. Ultima III came on a single flippy disk.
What you did was use side one for booting and a copy of side 2 for game
play/character storage.

There was also an easter egg if you ignored the insert side 2 or 'create
a character to start' prompt, I can't remember exactly. If you just went
load character or something you would get the a few prerolled characters
with Ultima insider names like Shimano<?>.

I am having XL 5-pin DIN to SCART cables made by a professional
manufacturer; these will be the finest Atari cables ever made - better
than studio quality - using top of the range cables and connectors.

If anyone in this group would like one please email me; I may as well
get a few made at the same time. They will be expensive though.

Thanks everyone!

Yes, that is the why I played it. Still, great fun though.

The XL does not have RGB output so most of the SCART pins are unused.

DIN to S-video plus phono is simpler.

And one can connect the phono pins to a hi-fi system.

Absolutely. And my TV has an S-video jack too. Unfortunately the weight
of a high-end cable puts a lot of strain on an S-video socket; for once
the much-hated SCART has an advantage in its bulk!!

Folks, I'm looking for a Magnavox Pro, RGB Monitor.

It works with Atari 8-bit and other computers like Atari ST.

If you have one for sale or trade contact me....

Thanks,
phantomm@bellsouth.net

Which output driver are you using? On Win32, there is SDL, DirectSound
and WAV (the latter only saves the sound, it doesn't play it). On Linux,
I've SDL, Oss, OSSHQ and ALSA to offer.

So long,
     Thomas

I tried all.

Do you have a .conf file I can try out?

send to my email.

Thanks.

Hi!

I don't need some but you could give me the PINout.

Thanks.

Best Regards,

Daniel Mandic

Howdy friends,

is there a way to use Visicalc with a XEP80? As far as I remember,
Visicalc is using standard graphics 0 text mode so it could work. I've
never been a big friend of the XEP80 due the bad usability (joystick
port suxx!!) and the poorly support for serious business applications.
But Visicalc surely would be a great thing to use with XEP80 on the 8bit.

Visiting a local drugstore (Het Kruidvat) I saw they were selling "Atari
Flashback" gameconsoles for less than 35 euro.

Is there any chance this professional manufacturer could make SIO cables? :)

I have been wanting to find the data sheets in case its possible to modify
the rom code to add scaling and positioning commands.

hi,
  does anyone here know of technical information sources for SpartaDOS
X? for example, the actual file details for the carts relocatable
files, or any other info. mostly what I have found is in Polish and I
cannot read that at all. any help will be appreciated.

Ken

Hi,

> I tried all.

Well, I afraid that still doesn't answer my initial question,
namely "what is all"? (-; Specifically, are you talking about
the win32 version or the Linux version as the answer may really
depend a lot.

> Do you have a .conf file I can try out?

Various, but that won't help you much unless I know your
target architecture. If even SDL cannot get out a sound,
then something's considerably broken.

Which sound chip is this, if I may ask? (Sound hardware).
Try "alsamixer" on Linux, the device manager on Win32 machines.

Then, please check the sampling frequency in the sound setup; some
chips only allow fixed frequency output here, something like 48kHz or
44.1kHz, depending on the hardware. It might help to try here a
bit. Actually, the program *asks* the hardware which frequencies it is
able to deliver, but I've seen several notes that especially some
DirectX drivers are "considerably broken" and do not deliver this
data.

If you see any error messages, please let me know, too.

BTW, you can edit the ".conf" files with an editor of your choice,
that's just plain ASCII.

So long,
     Thomas

In what way are they better than studio quality?

Iain

Anyone got the source code for the Atari 400/800 OS and/or BASIC?

I've found a huge 6 MByte pdf here:

http://www.strotmann.de/twiki/bin/view/Infothek/AtariTechnicalReferenceNotes

I can't just stick it through an assembler,
but I can disassemble the binaries and try to re-create the source
by adding the original comments.

No way am I typing in all the mnemonics as well!

Made a start on the project here:

http://homepage.ntlworld.com/kryten_droid/Atari/800XL/atari_os/
atari_os_contents.htm

but have only done 1/16th of it so far (the zero page memory allocations).

Just wondered if anyone already had the source code in text form?

K.

Hi,

> Anyone got the source code for the Atari 400/800 OS and/or BASIC?

Not the original, this would be a copyright violation. But if
a work-alike (plus bug fixes and improvements) is good enough

for you, then yes, here's a version that assembles with the CC65:

http://www.math.tu-berlin.de/~thor/atari++/

On the page down, check for os++.tgz.

> Just wondered if anyone already had the source code in text form?

"Almost". Os++ keeps a couple of improvements made in the XL series,
minus the parallel port stuff, plus an built-in FMS and DOS, plus
a couple of improvements (optional text window for Gr.9 to 11 and
others).

So long,
     Thomas

Sorry about the lack of info...

I'm using the Win32 version and tried all sound options, WAV, DirectX and
SDL.

Can you supply me a .conf file for the Win 32 version at my email thanks.

I think that's a fait accompli, so much Atari stuff is already on the net and there is no real Atari company to be angry about loss of earnings etc.

The spirit of the law is to make allow innovators to gain the rightful profits of their labour.
They've all done that, and wound up business when profits were mined out.

Yep, did that but the file is not there.

I'll have a go at re-sourcing the code from the binary, using the cc65
disassember features.

    Is there a program that will do a surface scan and map out bad sectors
on hard disks? I run the hdphmt9 program and it formats the hard drive,
then you run the hdfmtdir or whatever it is and it makes it usable. But I
want something to scan for bad sectors.

Thomas

I attempted to take the PDF and OCR it using OmniFormat, PDF995s, and
OmniFormat OCR Module (a Free Windows based suite that supposedly
converts various graphics formats to PDF, PDFs to various graphics
formats, and OCR of all). OmniFormat broke down the PDF into
individual JPEGs but the image quality is too low to obtain acceptable
OCR or the OCR module is not good enough.

Sorry, I tried.

At least with separate JPEGs I can turn the images from landscape to
portrait mode and be able to read the source code on the screen.

Not sure, but FLASH BACK by ICD might do this.

I have the software and manual but I'm not near it to check.

I did see Flashback on a Atari FTP site awhile back.

If you don't have it, you might want to get it.

Yeah I use that to back up. However, When I copy between my D2 and D4 i'm
getting an error 144. I think I need to scan for bad sectors. I'll check
it out.

Thanks!

Thomas

Got a question that you might can help me with...

Years ago I bought a 8bit hard drive system with ICD MIO.

The system had 2 hard drives. One is a Seagate ST225 and seems to have
a Adaptec 4000 controller board installed on the bottom of the drive.

The other drive does NOT have a controller board on the bottom of the
drive.

However, In the case was a Adaptec 4000a Controller card and both drives
were connected to it with cables. It ran just fine. But the powersupply
went
bad and I've not replace it yet.

Does each drive need its own controller card or can you run more than
one
MFM/RLL drive off of one Adaptec controller using the MIO?

The Seagate 225N has a built in controller. The other one I'm not sure how
many drives the adaptec controller can use. I think you can address 7
devices. I'm not really sure about the atari. I know I have two 225n
drives and one is id0 for boot.

               Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit

family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

    I think what I need to know is if there is a low-level format program
that will map out bad sectors for SCSI hard disks? If not I may have to
connect it to a PC and low-level it there first.

Hi Iain!

Studios have budgets. The top of the range stuff get used on private
systems and on system demos.

That doesn't change the problem, though. The Atari owners (now Infogrames)
haven't released the sources as far as I'm informed, so the problem
remains as stated.

> > On the page down, check for os++.tgz.

I think that you can have two MFM/RLL drives on each controller card. I used to have it and it worked fine, but after a move, nothing comes up on anything. Can't even reformat or start over. I tried two different 4000A controllers and several drives. I might have forgotten how to do it or need the same low level formatter as the original poster does. Anyplace to buy Flashback?

Thanks.

I've had similar problems.

Whenever I scan a document for archival, I scan it to 300 dpi monochrome PNG
(lossless) so that it is good enough for OCR if someone ever wishes to do
so.

When putting images on the web to be read on a screen, I use copies at 100
dpi.

I also avoid scanning to pdf because it creates one huge document to
download before starting to read, and it is a pain

As always, JPG is the wrong format for storing scanned text.

> At least with separate JPEGs I can turn the images from landscape to

> portrait mode and be able to read the source code on the screen.

The pdf file security settings allow me to rotate the pages for viewing (which suits all but the cover page), but not save it like that. Another reason I dislike pdf files!

If I had that book myself I'd re-scan it for you.

Intriguing - is that a collection of the data sheets?

> 4) Programming the 6502 by Rodnay Zaks

That and the Z80 version by Leventhal were the books every serious home-computer user had in the 1980s. I used to see them everywhere, then in bargain bins, then they disappeared entirely apart from a few copies on eBay.

I'm surprised that they have not been turned into electronic versions, like
the many more machine-specific books (e.g. at
http://www.atariarchives.org/).

I started turning the Z80 version into HTML, and of the 451 pages I scanned
I have done 77 and have 379 to go! (1/9th total).

If you scanned the 6502 book into 300 dpi PNG files, I'd be interested in
that.
Though don't hold your breath for me to OCR/HTML it! :-)

9V ac out is correct. I guess you're in a 240v country, else the plug
wouldn't fit.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)

This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Hello, everyone. I have a friend looking for an Atari Club for support in
Illinois? 8 Bit and/or ST. He has no access to NewsGroups. If someone can
E-Mail contact info I can forward it to his E-Mail! Thanx! ===Ben===

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/
Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at
http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received
Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify
Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

UK. Given all the years since manufacture is a circuit diagram for the 1050
something I am likely to get hold of?

I do not know where to find a circuit diagram, but if you use a digital
camera
to take a picture of the circuit board with the damaged component, I could
probably look inside one of my 1050 disk drives at the same location and
read
out the colour code of the resistor for you.

Thank you for the kind offer.

In fact it turns out to be an inductor, I should have realised this from the
designation which is L6. I did a Google this morning for cct diagrams and
found one for the 1050. It gives the value of the inductor so replacing it
ought to be easy. Of greater concern is why it burned in the first place.
There isn't really much more I can post on this ng until I have done some
measuring and soldering but I appreciate your offer.

Paul

I was wondering if anyone other than ICD ever sold a "cartridge
expander" for the XE models? Perhaps in Europe? Of course, the ICD
model was actually an adapter with two cartridge jacks between the XE
ECI and the MIO which used the 600/800 XL PBI.

I don't recall any others, and yet they are sooo handy. I seem to
recall some pre-promotions for one, but I think that it never was
actually sold. These were quite popular with other computer systems,
some with selector switches to choose the cart(s) that you want to be
active (or none, IIRC). You could probably even adapt this to XL's by
using a short ribbon cable & connector to "plug" into the XL cartridge
jack. (?)

From...
http://desnoyers.org/retrochallenge/

Introduction
Do you depend upon modern computers, or are you a creative spirit who can push

the limits of your old hardware in order to fulfill your everyday needs? The Retrochallenge is where you find out. This competition promotes the use of vintage hardware by establishing up three challenges. You are encouraged to enter any or all of theses challenges, to judge the creative works of other participants, or simply join in the discussions on our mailing list.

What are these challenges? If you enjoy creating original artwork, music, or programs on your legacy computer, then the creative challenges are for you. Simply do what you normally do, then submit your work to be judged by your peers. The second challenge is simply using a qualifying computer through the month of July, in a competition to see can survive a month without the latest in gadgetry. The third challenges judges how well you could communicate with the outside world on a retrocomputer.

So what is the prize? The excitement of participating in the challenge (everyone gets that one), and the respect of your peers. In order to help you gain the recognition of your peers, MLAgazine has gratiously offered to publish an article about the winner.

(6502 computers get a x3 modifier compared to the standard '030 computers which will be a modifier of x1, so running an 8-bit in this competition could be fun.)

     You think you got what it takes? :)

     Doctor Clu

It contains three Atari manuals:

1) Operating System User Manual
2) Operating System Source Listing
3) Hardware Manual

Really interesting stuff but well beyond my level of knowledge or need.

Photos can be seen within the auction:

I agree. I've sold a couple of copies of the Rodnay Zaks texts on ebay
and they always do well. A text or HTML version would make an excellent
online reference.

That's great! I didn't know they were available online!

I've had the earlier manuals, dated 1979 (purchased in 1981, I think),
but my manuals didn't include the source code, only the Equates.

Sorry I went off-topic but not to worry, I think the original books
will obtain a tidy sum. There are plenty of collectors here.

I wasn't posting it as spoiler for the auction. Paper versions are easier

to read and there will always be a market for the original.

Paul

That and the Z80 version by Leventhal were the books every serious
home-computer user had in the 1980s. I used to see them everywhere,
then in
bargain bins, then they disappeared entirely apart from a few copies on
eBay.

It's killing me that I can't find my copy of the 6502 book by Lance
Leventhal. My 6502 assembler knowledge is so rusty and picking it up
again is not as easy I had remembered it being. LOL!

I wasn't posting it as spoiler for the auction. Paper versions are
easier
to read and there will always be a market for the original.

...and I wasn't criticizing you. Sorry if it sounded that way.

I didn't/don't think your post will spoil the auction.

There are true enthusiast collectors here and they will definitely
scoop up the books.

Me, I just caught the nostalgia bug a bit. Some programming, maybe a
little gaming (with emulators and real Atari computers), gaining some
knowledge on things that I didn't learn when the Atari was new, that
sort of thing.

Further to my earlier post in Atari 8 bit programming tools I think it's
worth posting the index page link here for those who haven't seen it, quite
a gold mine for nostalgia.

That's great! I didn't know they were available online!

I've had the earlier manuals, dated 1979 (purchased in 1981, I think),
but my manuals didn't include the source code, only the Equates.

Correction: Make that dated November 1980.

:
: Thank you for the kind offer.
:
: In fact it turns out to be an inductor, I should have realised this from
the
: designation which is L6. I did a Google this morning for cct diagrams and
: found one for the 1050. It gives the value of the inductor so replacing
it
: ought to be easy. Of greater concern is why it burned in the first place.
: There isn't really much more I can post on this ng until I have done some
: measuring and soldering but I appreciate your offer.

Paul, I tried to email you the 1050.zip file which contains all of the
schematics, but it bounced. email me with a valid address to send it to
and I will try again. Thanks,

Apple II Forever, Apple II Together

news:42b7c2d64e95e2@comcast.net...

: I have done business with Ben before. Nice guy...

Ed,

I agree that he is probably a great guy, but what people are saying
is that his continual posting and multiple posting of his ads does
give the impression that he is desparate to sell his goods.

The Apple II groups has a special place for such ads, and there
should be one for Atari 8 bit groups as well, if there isn't one
already. That would be the place to post his ads where people
would go if they were in the market for Atari items.

Of course, there are those who just need something to complain
about and we have those in all groups, not just in the Atari-8
group.   :o)

I seem to recall that there either was one other company, or a privat
person wanted to make some. Heck, I'ld love it, if somebody would pick
this up.

BTW I actually have one of those ICD cartridge expanders. Bought it
when I needed a printer and modem cable for my 850. I'm still using the
expander. With my BlackBox and an XE.

The expander is permanently plugged into the XE. It's connected to the
BlackBox using the cable that is intended to connect the XL to the
BlackBox. I do this so that the connection between XE and BB is
flexible.   That way I can move the XE around on my desk a little bit
without damaging the edge connector. The only thing that could get
damaged is the ribbon cable. But a 50 pin ribbon cable and the 50 pin
connectors will probably be available for the next couple of years. I
even found a place where they give me the strain reliefs for these
connectors for free when I buy the connectors. Apparently nobody asks
for them.

CU   Mathy

PS I haven't forgotten about the scans. I'm looking for a scanner and
my eye has fallen on the Canon Lide 500F, but I'm not sure yet if it
will scan 3D objects like motherboards. (Not that I need that for the
NS405 data sheets.)

No, my entry didn't lose. I didn't have an entry because I've never done
business with Bravo Sierra Computers.

I can recognize and appreciate Ben's KISS philosophy when it comes to his
posts and website content. However, this approach makes his post and
website very difficult to read if you're not viewing the content in a
40-column browser.

If I might make a suggestion, Ben may wish to have two versions of his
website content. Perhaps if Ben created content for 40-column viewers and
for regular viewers, he wouldn't get so much flack over how his
advertisements appear.

It would probably go a long way in improving the outward appearance of his
business as well.

Call me naive, but if Ben put a little more effort into making his business
look professional, he wouldn't have to spam as much.

Just my opinion.

I am running a chat server for Atari computer users.

This is real time chat for the Atari Community. You do not need an account or a password and there are absolutely no restrictions.

To use the server just Telnet to: utoc.dyndns.org

It's that simple. You can even use your Atari to connect to this server if you're able to telnet from your Atari.

There are currently 2 channels available. Channel 1 is Atari 8-Bit and Channel 2 is Atari ST.

This is a brand new service, so if there's nobody there when you first connect, just give it some time.

Oh yeah, when you first connect to the server, you'll be asked to enter a name for yourself. This is the name that other users will identify you by. These names are not saved when you disconnect and may not be available for your use the next time you connect if somebody else is currently using the name.

Check it out...

The ones with red arrows have a link to scans, in some cases admittedly back
to atariarchive.org but in other cases to alternate sources. The Mac/65
link doesn't work but is available here
www.future-net.pl/~10vg3b/scorch/filez/mac65_manual.pdf

I just wish he'd learn how to use an apostrophe.

Hi,

Thanks for the URL.

I got all the ROMs except for the MIO 1.1. The code comes up on my
screen in my browser. All others
give me the option to save them.

BTW, I have a ICD MIO 1meg version. I was just wondering what one could
do with this ROM except
maybe make one if you have a damaged one?

Anyway, I'd like to have a copy just in case. Can someone check and see
if they have the same
problem as I am having?

Regarding the SDX roms, can these be used on the 1 meg Ram carts or is
there a different type
for that.

Looks like I'm going to have to go that route to get sometype of SDX
cart.
I'd like a SDX cart to use with my ICD MIO. Even if its not a original.

Also, I know a few of you guys burn your own ROMs. Thats something that
I'd like
to get into. I have a Tech background. What would be a good all purpose
ROM
burner to get ahold of?

I need one that will do 8-bit ROMs and related stuff and also
Atari ST-Falcon ROMs. Gals and the like. 16Bit and 32Bit stuff.

Any tips on good Burners and where to find them at a good price
would be most helpful.

I actually have some programs for the Atari 8-bit that I would like to
burn in a chip and put in a cartridge form.

Also have similar stuff for the Atari ST/E thru Falcon machines.

Any help is much appreciated.

I mirrored the website, got 286 PDF's, of the few I checked only one was
corrupt. Theres alot of C64 stuff mixed in as well.

Hello,

I have many boxed ATARI 2600/7800 games, most of the new :

PAL Games : 1.50 Euros each

Astroblast (Telegames, PAL) www.vectrex.de/c/astroblast.jpg
Big Bird's Egg Catch (CCW, PAL) www.vectrex.de/c/bigbird.jpg
Cookie Monster Munch (CCW, PAL) www.vectrex.de/c/cookie.jpg
International Soccer (Telegames, PAL) www.vectrex.de/c/intsocc.jpg
Kung Fu Superkicks (Telegames,PAL) www.vectrex.de/c/superkic.jpg
Pick 'n' Pile (SALU, PAL) www.vectrex.de/c/pickpile.jpg
RealSports Tennis (ATARI,PAL) www.vectrex.de/c/rstennisp.jpg
Super Breakout (ATARI, PAL) www.vectrex.de/c/superb.jpg
Super Challenge Football (Telegames, PAL)
www.vectrex.de/c/football.jpg
World Championship Baseball (Telegames, PAL)
www.vectrex.de/c/wsbase.jpg

PAL Games : 2.50 Euros each

Bogey Blaster (Telegames, PAL) www.vectrex.de/c/bogey.jpg
Chess (PAL) www.vectrex.de/c/chess.jpg
Mission 3000 (BitCorp, PAL) www.vectrex.de/c/mission3000.jpg
My Golf (HES, PAL) www.vectrex.de/c/mygolf.jpg
Title Match Pro Wrestling(Absolute,PAL) www.vectrex.de/c/title.jpg
Tomcat (Absolute, PAL) www.vectrex.de/c/tomcat.jpg
Weltraum Tunnel (BitCorp, PAL) www.vectrex.de/c/wtunnel.jpg

NTSC Games : 1.50 Euros each :

RealSports Football (ATARI,NTSC) : www.vectrex.de/c/rsfootvc.jpg
RealSports Tennis (ATARI,NTSC) : www.vectrex.de/c/rstennis.jpg
RealSports Volleyball(ATARI,NTSC) : www.vectrex.de/c/rsvolley.jpg

NTSC Games : 2.50 Euros each :

Galaxian (ATARI, NTSC) : www.vectrex.de/c/galaxian.jpg
Pole Position (ATARI,NTSC) : www.vectrex.de/c/polepos.jpg
Jungle Hunt (ATARI,NTSC) : www.vectrex.de/c/jungle.jpg

ATARI 7800 PAL : 1.50 Euros each

Mat Mania Challenge (ATARI,PAL) : www.vectrex.de/c/mat.jpg
Sentinel (ATARI,PAL,Lightgun only) : www.vectrex.de/c/sentinel.jpg

ATARI 800 XL/XE NTSC (PAL compatible) cartridges 2,50 Euros each :

Ballblazer (ATARI)   : www.vectrex.de/c/ballblaz.jpg
Crossbow (ATARI)   : www.vectrex.de/c/crossbow.jpg
Hardball (ATARI)   : www.vectrex.de/c/hardball.jpg
One on One (ATARI)   : www.vectrex.de/c/oneonone.jpg
Pole Position (ATARI) : www.vectrex.de/c/polexl.jpg
Star Raiders 2 (ATARI) : www.vectrex.de/c/starrai2.jpg
Tennis (ATARI)   : www.vectrex.de/c/tennisxl.jpg
Thunderfox (ATARI)   : www.vectrex.de/c/tfox.jpg

Hardware :

4 Euros each (2 units in 1 box) :

CX-50 Keyboard Controllers (ATARI) : www.vectrex.de/a/keyctrl.jpg

2 Euros :

Sears Paddle/Joystick Combo   : www.vectrex.de/a/paddle.jpg

Most of the games are boxed and new, sealed.There are huge qts. of
these games available, usually 50 or more copies.

These games are great for resale or for homebrewers who need empty
cartridge shells.

Telegames cartridges contain 4K or 8K EPROMs, this may be interesting
for homebrewers.BitCorp games contain 4K EPROMs.

I can sell the games OR trade for ATARI 2600/7800, ATARI ST, ATARI 800
XL/XE, Commodore 64, AMIGA, NES, Gameboy, ATARI Lynx, Colecovision,
SNES, Intellivision, MS DOS or other games.

I can ship worldwide and I accept paypal.

Shipping depends on the final weight, it's 12,90 Euros for up to 15
games, 32 Euros for up to 40 games and 62 Euros for up to 150 games.
In Europe, shipping is 8,60 Euros for up to 16 games, 17 Euros for up
to 40 games and 32 Euros for up to 150 games.

If you're interested, please write to my email-Address.

MG

Nice.

I think the hardware guide is one that has been turned into HTML.
http://www.howell1964.freeserve.co.uk/Atari/800XL/atari_hw/atari_hw_contents.htm

Or at least, the chip data sheets have, the hardware guide seems to be the
data sheets rolled together.

BTW does anyone have the Atari OS source code, or Atari BASIC,
 in machine readable text form (not images)?

I'd quite like to run it through the CC65 assembler,
so I have source code I can modify.

This coming July is my Christmas in July sale. I'm asking for Charity.
Business has never been so slow. I'm way behind on my bills and I need to
catch up. Summer is the slowest time of year. I've never had it so bad. If
Business doesn't pick up soon, there is going to be one less Atari Dealer.
A pastor of mine taught, "Make your needs known and Help will come!" I'm
not asking for a hand out, I just want to earn your Business & make you a
satisfied customer. While business is slow, I relax by playing Atari Video
Games. I don't mind waiting since I have the best customers. So goto

http://BenSells.Atari.org

So E-Mail Atari@aracnet.com or Call Ben anytime at (503)256-9974!

http://www.aracnet.com/~atari/whybuyben.htm Ben's Living References!
http://www.aracnet.com/~atari/shipping.htm   Tricks I can Do.

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/
Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at

Hi,

Some of you may be interested in a new book that has been published by
a small specialist publisher. The book reviews and discusses over 200
home computers and consoles, including the Atari 8bit, 16 bit and
console ranges. It manages to pull off the unusual combination of being
really well designed (224 full colour pages) and informative (lots of
interesting facts about the systems, key titles and market history).

Anyway you read more about the book and also have a look at some
example pages at my web site:

http://www.jcec.co.uk/book.html

I'm in regular contact with the author, a really friendly ex-games
journalist, if you have questions.

Cheers
John

I posted a similar message in a older thread.

Anyway, I know some of you folks burn your own ROM images in chips to be
used in cartridges and the like for the Atari 8-bit.

I am interested in getting a EPROM Burner that will allow me to do this
with
8-bit Roms and also 16 and 32 bit Roms for the Atari ST/E thru Atari
Falcon
computers.

I have some Atari 8-bit programs that I wrote which I would like to burn
into
a cartridge type chip to be used on the Atari 8-bit. Also have similar
stuff
to do on the Atari ST/E Falcon Line of machines.

I was wondering if anyone here who has experience with these types of
Burners could give me some info on what would be the best type/model
of Burner to do these types of projects?

I need to burn different types of chips such as GALs. And if possible
I'd
like a burner that could duplicate a chip inserted and burn a exact
copy.

If anyone here could pass along some info, it would be much appreciated.
URLs and the like also.

Also, I need a source for blank Atari 8-bit cartridge PCBs and Atari ST
cartridge PCBs.

And respond in e-mail please,

You can contact me at phantomm@bellsouth.net

Thanks
.

If you only need a device programmer that can do eproms and you have access to a PC, then one of the really cheap parallel port programmers will do just fine for you.

Go to eBay and search for 'Willem Programmer' and you will find many boards that can easily and quickly program the small eproms you will be using for 8-bit and ST carts. These are open design programmers with free software, so as long as you wont need technical support from a vendor, you will be fine.

> Also, I need a source for blank Atari 8-bit cartridge PCBs and Atari ST
> cartridge PCBs.

You can get 8k/16k PCBs that fit into standard Atari cartridge cases from www.atariage.com. These accept 2764 or possible 27128 eproms.

Hey... Hope you got the last email I sent complete with the zip file...
I've been pretty slow on the Atari scene of late due to various reasons, not
the lesser of which is working 60-70 hours per week. <sigh>

Thanks for the info on the command line commands, I wasn't aware that was an
option. I did have the color information saved to a file from before and
was able to import the settings that way though - so that is an option as
well.

Until I read this thread I wasn't even aware of the BREAK key problem. I
wonder if that could have had happened when the mappings for the Fx keys to
START, SELECT and OPTION were changed?

Same here just a standard wintv go card (with built in radio option)

I either use the on board s3 grapics card or my tnt2 m64 agp with 32
meg ram

I mostly use wintv 32 and 2000, dscaler now and again

I will be looking to u/g to the digital tv version of wintv (which is
already out)

Jack just did not want to spend the money. Too cheap. Target wanted to stock
the Lynx when it first came and put in a HUGH order. Atari hardly sent them
any. Same for the ST and Jaguar.

Hey... Hope you got the last email I sent complete with the zip
file...

Hmmm, was it something recent?   The last email I have from you is
dated April 1 (but then I don't save all my emails, sorry).

 I've been pretty slow on the Atari scene of late due to various
reasons, not
the lesser of which is working 60-70 hours per week. <sigh>

Think of all the extra money you've earned to buy more Atari gear...

Thanks for the info on the command line commands, I wasn't aware that
was an
option. I did have the color information saved to a file from before
and
was able to import the settings that way though - so that is an option
as
well.

Good idea.

I should be on the web already. I googled for it, but haven't been able
to find it.

There are a couple of translated (from german) texts on my site with
additional infomation about the XEP80.

Check out: http://www.mathyvannisselroy.nl/special%20stuff.htm

Thanks for info.

Some one already sent me the English manual text.

If someone needs it, I'll pass it on. just let me know.

Are you guys looking for an original one or just one to use? I might
be able to burn the bin's to eprom and make you a repro. Don't know
if there is still a copyright holder or not though.

Having successfully fitted a Granlin Stereo upgrade to an XEGS (no mean
feat since it doesn't fit) I was surprised to find Bounty Bob Strikes
Back had stopped working.

I checked the memory on self-test and it was all green. Is there
anything strange about stereo upgrades that would stop some programs
working? Certainly BBSB seems particularly sensitive; a few years ago
it failed to run on another Atari of mine after installing Warp OS (the
roms of which later transpired to be ntsc intead of pal ones). Anyone
got any ideas...?

If you have the binaries for this cart, can you pass them
to me via email? I can burn them myself. I'd like this cart.
I have all the parts to make it. Would appreciate it much.

Thanks,

Maybe, just maybe, nobody wants your 8-bit fossils. Doh!

You sure don't see this crap on Craigslist.

Bins of the ROM alone won't help. You need the programmable logic array
chip that's on that cart to make it work too. I don't think anyone has been
able to reverse engineer that yet.

Correct, after seeing that it's a 64K PROM, I agree that reproducing
the logic to bank switch it would be next to impossible without the
source code. So, in lieu of that, I took Action, BasicXL, and Mac65
instead. All of which are 16K ROMs.

I want an origina one, but, if there's no other way i will burn a copy
and bought a manual from myatari. Thank you very much...

What about the Flash Cartridge from AtariMax. They have the 1 meg and
8 meg versions. Wouldn't need bank switching unless they emulate?
